Research and Development is

the vehicle by which organizations and economies create opportunity, innovation and secure a stream of future products and services. These outcomes are all critically important sources of sustainability in a world that is changing faster than most companies can keep up. The challenge behind them is the fundamental unpredictability of R&D; which is why effective project management is so important. Ron Basu's *Managing Projects in Research and Development* explains how and why project management can provide a means of helping to plan, organise and control multi-disciplinary research activities without stifling innovation. Combining research with practical examples and experience from a career that has included blue chip organizations such as GSK,

GlaxoWellcome and Unilever, Ron Basu offers a rigorous guide to the fundamentals of R&D project management including project lifecycle management, risk management, cost, time quality and other success measures as well as the keys to operational excellence in this complicated world.

The 7th International Conference on Pervasive Computing (Pervasive2009) was the first time the conference was held in Asia. Before reaching Asia, the conference made a long journey around the globe: starting in Zurich, traveling to Linz and Munich, then passing through Dublin before leaving Europe for the first time to be held in Toronto, followed by Sydney

last year and now Nara, Japan. Over the last few years, Asia has contributed to the topics of Pervasive Computing with research ideas, engineering and many innovative products, so it was wonderful to host the conference in Asia. When the Pervasive Computing conference series started in 2002, the integration of computing systems into everyday products was just beginning. Seven years later we now see - especially in many parts of Asia - the widespread use of computing technology embedded into our daily lives. Pervasive 2009 focused on the presentation and

discussion of novel aspects of architecture, design, - plementation, applicationand evaluation of PervasiveComputing, thus enabling a closer and more frequent use of computing systems. As the ?eld of pervasive computing matures, the Pervasive Conference gains signi?cance worldwide, not only among researchers, but also in industry and general society.

In this thorough inventory of software products used in indexing, professional indexers share their favorite features, tips, and techniques. As one would expect, the major dedicated indexing programs (Authex, CINDEX, MACREX, SKY Index, and

wINDEX) are compared, but today's indexers are asked to do more than produce print indexes. They need tools to make indexes Web-compatible: HTML/Prep, HTML Indexer, and RoboHelp are covered. They have to embed indexing entries into originating documents: Framemaker, Microsoft Word, PageMaker, and Ixgen are covered. Voice recognition software is described, and a review of Sonar Bookends provides value for those contemplating automatic indexing. Here is an essential guide for indexers and technical writers desiring to maximize the efficiency of their day-to-day indexing and meet special project needs. Windows Magazine
