Rapid advances in computer technology and the internet have created new opportunities for delivering instruction and revolutionizing the learning environment. This development has been accelerated by the significant reduction in cost of the Internet infrastructure and the easy accessibility of the World Wide Web. This book evaluates the usefulness of advanced learning systems in delivering instructions in a virtual academic environment for different engineering sectors. It aims at providing a deep probe into the most relevant issues in engineering education and digital learning and offers a survey of how digital engineering education has developed, where it stands now, how research in this area has progressed, and what the prospects are for the future.

"Sony vs. Samsung is business history at its best! It explores the divergent fortunes of these two electronics giants in the last decade and identifies the true reasons behind Sony's decline and Samsung's rise. Contrary to popular belief, Chang shows that success (or failure) does not simply arise from different strategies. Rather, it emerges from major decisions that are deeply rooted in the companies' organizational processes and their executives' political behavior. This book is a must-read for any senior executive." —Constantinos Markides, Robert P. Bauman Professor of Strategic Leadership and Chairman, Strategy Department, London Business School "Sea-Jin Chang has produced that rarity in a business book--one that is as valuable to practicing managers as it is insightful to academic researchers. In this fascinating comparison of two modern global giants, he applies his high resolution research microscope to their changing fortunes by dissecting their contrasting strategies, and providing interesting insights into their divergent organizational processes and management practices. This is a very valuable contribution to the international business literature. It will end up in as many corporate boardrooms as faculty seminars." —Christopher A. Bartlett, Thomas D. Casserly Professor Emeritus, Harvard Business School "Sea-Jin Chang has written a fascinating comparison of Sony and Samsung that will be valuable to anyone interested in strategy, organizations or international business. The interwoven and very detailed case studies of two very different companies in overlapping industries illuminate problems such as adaptation to technological change (analog to digital), organizational flexibility and globalization. His attempt to analyze both strategic development and implementation is successful and very useful. Both academics and practitioners will learn a lot from this book." —Stephen J. Kobrin, William Wurster Professor of Multinational Management, The Wharton School, University of Pennsylvania "Refreshingly original and entertaining, this book analyzes major strategic decisions of Samsung and Sony and highlights organizational processes and top management leadership that have shaped their performances. This is a must-read for all executives who want to understand the strengths and weaknesses of Asian competitors. It also provides penetrating insights to other Asian companies with global ambitions." —Myoung Woo Lee, President and CEO, iriver

**Digital TV Over Broadband** Simon and Schuster

Digital TV Over Broadband: Harvesting Bandwidth offers a clear overview of how technological developments are revolutionizing television. It details the recent shift in focus from HDTV to a more broadly defined DTV and to the increasing importance of webcasting for interactive television. Digital Television examines the recent industry toward a combination of digital services, including the use of the new bandwidth for additional channels of programming, as well as some high definition television. The book discusses the increasingly rapid convergence of telecommunications, television and computers and the important role of the web in the future of interactive programming. This new edition not only covers the new technology, but also demonstrates practical uses of the technology in business models.

New York Times bestseller: A "detailed and informed" look at the history and tactics of the global terror group—and how to defeat it (Richard Engel, from the foreword). ISIS—the Islamic State of Iraq and Syria—has taken on the mantle of being the single most dangerous terrorist threat to global security since al-Qaeda. In *Defeating ISIS*, internationally renowned intelligence veteran and counterterrorism expert Malcolm Nance gives an insider's view to explain the origins of this secretive group, its violent propaganda, and how it spreads its ideology throughout the Middle East and to disaffected youth deep in the heart of the Western world. Most importantly, *Defeating ISIS* gives an amply illustrated, step-by-step analysis of the street-level tactics the group has employed in assaults against fortified targets, in urban combat, and during terrorist operations such as those in Paris during the November 13 attacks. As much as ISIS is a threat to Western targets and regional stability in the Middle East, Nance describes not only its true danger as a heretical death cult that seeks to wrest control of Islam through young ideologues and redefine Islam as a fight to the death against all comers, but also how to defeat it. *Defeating ISIS* is the first highly detailed and fully illustrated look into the organization by one of the world's foremost authorities in counterterrorism. "Comprehensive, authoritative, and detailed." —*Perspectives on Terrorism* "You should buy this book." —Rachel Maddow

**The Focal Easy Guide to Photoshop CS2**

Investigating the innovation activities of multinational corporations, this book uncovers and examines why the geography of innovation by multinationals is overwhelmingly local, in spite of their global operations in manufacturing and sales through case studies of produce development by three global players: Toyota, Sony, and Canon. The microdynamic approach of the book allows an in-depth investigation of the engineering and technical aspects of innovation making. The book unfolds the complex and constant process of trial and error in innovation and reveals three fundamental natures of innovation making: complexity, interdisciplinarity, and prototyping and testing. In order to manage these three natures of innovation, firms have to plan, ironically, for unplanned situations and to collocate knowledge, people, and resources.

This book includes a selection of theoretical and practical accounts of the acquisition of Portuguese from a broad range of linguistic perspectives. This collection is particularly appealing in the broad academic sphere of language acquisition due to the fact that there has yet to be one entirely dedicated to Portuguese as an Additional Language (PAL). This volume showcases the breadth of research being carried out on topics ranging from the acquisition of aspects from the main language modules (syntax, morphology, semantics, phonology, and pragmatics) to applied perspectives involving corpus-based approaches and experimental methodologies. Moreover, we present studies addressing a variety of learning contexts and learner types. The target audience includes researching scholars with a background in second language acquisition studies interested in learning more about the acquisition of Portuguese as an Additional Language from linguistic perspectives.
