Frogs from the genus *Xenopus* have long been used as model organisms in basic and biomedical research. These frogs have helped unlock key fundamental developmental and cellular processes that have led to important scientific breakthroughs and have had practical application in embryology, cancer research and regenerative medicine. *Xenopus Development* is a vital resource on the biology and development of these key model organisms, and will be a great tool to researchers using these frogs in various disciplines of biological science. *Xenopus Development* is divided into four sections, the first three highlight key processes in *Xenopus* development from embryo to metamorphosis. These sections focus on the cellular processes, organogenesis and embryo

development. The final section highlights novel techniques and approaches being used in *Xenopus* research. Providing thorough and detailed coverage, *Xenopus Development*, will be a timely and welcome volume for those working in cell and molecular biology, genetics, developmental biology and biomedical research. "Fairies Afield" is a children's fantasy story written by Mary Louisa Molesworth, a well-known English children's author in the late nineteenth and early twentieth century. The book, published in 1902, is part of Molesworth's wide body of work, which includes a number of novels and stories for children. The story follows two siblings, Tottie and Tittie, as they go on a fantastic journey into the world of fairies. The children discover a secret road in the woods

that leads them to the world of the fairies, where they meet a variety of wonderful creatures and participate in quirky and enchanting adventures. The kids become friends with fairies, elves, and other mystical creatures as they explore this magical realm. Like children's books from the Victorian and Edwardian eras, the story is full with endearing moments and soft moral messages. The narratives of Molesworth highlight kindness, amazement, and inventiveness. "Fairies Afield" perfectly encapsulates the essence of beloved children's books with its themes of friendship, magic, and youthful innocence. For those who appreciate classic stories of magic and adventure, the novel is still enjoyable.

Suggesting that the United States' dominant form of literacy is contingent and historical, not permanent and absolute, this book asserts that when a society changes its definition of literacy, it also changes its models of mind and its models for teaching English. The book challenges the assumption that the public schools are a failure, arguing instead that public school teachers have met every literacy challenge put to them by parents and

government. The book introduces a new standard of literacy ("translation/critical literacy"), and discusses how the new standard affects the English and language arts curriculum, the tools and methods of learning, and the conceptualization of assessment of knowledge. Chapters in the book are: (1) Shifting Social Needs: From Clocks to Thermostats; (2) From Oracy (or Face-to-Face Literacy) to Signature Literacy: 1660-1776; (3) Signature and Recording Literacy: 1776-1864; (4) Recitation and Report Literacy: 1864-1916; (5) A Literacy of Decoding, Defining, and Analyzing: 1916-1983; (6) The Transition to a New Standard of Literacy: 1960-1983; (7) The Event-Based Features of Translation/Critical Literacy; (8) Embodied Knowledge: Self-Fashioning and Agency; (9) Distributed Knowledge: The Technology of Translation/Critical Literacy; (10) Negotiated and Situated Knowledge: Translating among Sign Systems; (11) Negotiated and Situated Knowledge: Translating among Speech Events; (12) Negotiated, Situated, and Embodied Knowledge: Translating among the Modes; (13) Negotiated and Situated Knowledge: Translating between Stances; (14) Style and Worldviews in Literature and Public Discourse; and (15) Conclusion: "I Think It Happened Again." In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
