Sound waves travel through air at approx. 340 m/s (v, depending on temperature and humidity. The oscillating speed of sound is called the frequency f, measured in cycles per second or Hertz [Hz]. The combined length of one high- and one low-pressure zone is called the wavelength λ . We find: $\lambda = v / f$ Hearing We detect sound with our ear-drums.

Sound engineering technicians, also known as audio engineers or sound mixers, operate computers and equipment that record, synchronize, mix, or reproduce music, voices, or sound effects in recording studios, sporting arenas, theater productions, or movie and video productions. They record audio performances or events and may combine audio tracks that were recorded separately to create a multilayered final product.
