The perimeter defenses guarding your network perhaps are not as secure as you think. Hosts behind the firewall have no defenses of their own, so when a host in the "trusted" zone is breached, access to your data center is not far behind. That's an all-too-familiar scenario today. With this practical book, you'll learn the principles behind zero trust architecture, along with details necessary to implement it. The Zero Trust Model treats all hosts as if they're internet-facing, and considers the entire network to be compromised and hostile. By taking this approach, you'll focus on building strong authentication, authorization, and encryption throughout, while providing compartmentalized access and better operational agility. Understand how perimeter-based defenses have evolved to become the broken model we use today Explore two case studies of zero trust in production networks on the client side (Google) and on the server side (PagerDuty) Get example configuration for

There is a Threat Lurking Online with the Power to Destroy Your Finances, Steal Your Personal Data, and Endanger Your Life. In *Spam Nation*, investigative journalist and cybersecurity expert Brian Krebs unmask the criminal masterminds driving some of the biggest spam and hacker operations targeting Americans and their bank accounts. Tracing the rise, fall, and alarming resurrection of the digital mafia behind the two largest spam pharmacies-and countless viruses, phishing, and spyware attacks-he delivers the first definitive narrative of the global spam problem and its

threat to consumers everywhere. Blending cutting-edge research, investigative reporting, and firsthand interviews, this terrifying true story reveals how we unwittingly invite these digital thieves into our lives every day. From unassuming computer programmers right next door to digital mobsters like "Cosma"-who unleashed a massive malware attack that has stolen thousands of Americans' logins and passwords-Krebs uncovers the shocking lengths to which these people will go to profit from our data and our wallets. Not only are hundreds of thousands of Americans exposing themselves to fraud and dangerously toxic products from rogue online pharmacies, but even those who never open junk messages are at risk. As Krebs notes, spammers can-and do-hack into accounts through these emails, harvest personal information like usernames and passwords, and sell them on the digital black market. The fallout from this global epidemic doesn't just cost consumers and companies billions, it costs lives too. Fast-paced and utterly gripping, Spam Nation ultimately proposes concrete solutions for protecting ourselves online and stemming this tidal wave of cybercrime-before it's too late. "Krebs's talent for exposing the weaknesses in online security has earned him respect in the IT business and loathing among cybercriminals... His track record of scoops...has helped him become the rare blogger who supports himself on the strength of his reputation for hard-nosed reporting." -Bloomberg Businessweek

The growth of innovative cyber threats, many based on metamorphosing techniques, has led to security breaches and the exposure of critical information in sites that were thought to be impenetrable. The consequences of these hacking actions were, inevitably, privacy violation, data corruption, or information leaking. Machine learning and data mining techniques have significant applications in the domains of privacy protection and cybersecurity, including intrusion detection, authentication, and website defacement detection, that can help to combat these breaches. Applications of Machine Learning and Deep Learning for Privacy and Cybersecurity provides machine and deep learning methods for analysis and characterization of events regarding privacy and anomaly detection as well as for establishing predictive models for cyber attacks or privacy violations. It provides case studies of the use of these techniques and discusses the expected future developments on privacy and cybersecurity applications. Covering topics such as behavior-based authentication, machine learning attacks, and privacy preservation, this book is a crucial resource for IT specialists, computer engineers, industry professionals, privacy specialists, security professionals, consultants, researchers, academicians, and students and educators of higher education.

Global Problems, Global Solutions:

Prospects for a Better World by JoAnn

Chirico approaches social problems from a global perspective with an emphasis on using one's sociological imagination.

Perfect for instructors who involve students in research, this text connects problems borne by individuals to regional, global, and historical forces, and stresses the importance of evidence in forming opinions and policies addressing social issues. The book introduces readers to the complexities of the major problems that confront us today such as violent conflict, poverty, climate change, human trafficking and other issues that we encounter in our lives. It book concludes with a chapter on politics and government, underscoring the need for good governance at all levels – and cooperation among many layers of government – to build a better world.

Spam Nation Competition Bureau Canada Cyberbullying is a problem that is being increasingly investigated by researchers, however, much of the cyberbullying research literature to date has focused on children and youth. Cyberbullying at University in International Contexts fills the gap in the research literature by examining the nature, extent, impacts, proposed solutions, and policy and practice considerations of bullying in the cyber-world at post-secondary institutions, where reports of serious cyberbullying incidents have become more prevalent. This book brings together cutting-edge research from around the

world to examine the issue of cyberbullying through a multi-disciplinary lens, offering an array of approaches, interpretations, and solutions. It is not solely focused on cyberbullying by and against students, but also includes cyberbullying by and against faculty members, and permutations involving both students and faculty, as well as institutional staff, presenting perspectives from students, practitioners and senior university policy makers. It draws on research from education, criminology, psychology, sociology, communications, law, health sciences, social work, humanities, labour studies and is valuable reading for graduate students in these fields. It is also essential reading for policymakers, practitioners and University administrators who recognize their responsibility to provide a healthy workplace for their staff, as well as a safe and respectful environment for their students.

Why Africa? an abstract first painted in 1993 and reproduced in collage in 2004, is variously described by his admirers as an emotional revelation. The work depicts the African question problems and prospects including political instability, corruption, and poverty in the midst of rich natural and human resources. Thus, Why Africa? inspired him to write a book on the subject, applying his creativity with a unique perspective on the African case. Bona has written one book (unpublished) titled: The Ancient and Modern (1992) a story on Urualla, his ancestral origin in Nigeria.
