[The Chemical News and Journal of Physical Science](#) CRC Press

This book offers an in-depth verification of numerical solutions for differential equations modeling heat transfer phenomena, where the smoothed particle hydrodynamics (SPH) method is used to discretize the mathematical models. Techniques described in this book aim to speed up the convergence of numerical solutions and increase their accuracy by significantly reducing the discretization error. In their quest, the authors shed light on new sources of numerical error that are specific to the SPH method and, through them, they identify the characteristics of the solutions influenced by such errors. The accuracy of numerical solutions is also improved with the application of advanced tools like the repeated Richardson extrapolation (RRE) in quadruple precision, which was adapted to consider fixed or moving particles. The book finishes with the conclusion that the qualitative and quantitative verification of numerical solutions through coherence tests and metrics are currently a methodology of excellence to treat computational heat transfer problems. Mathematicians in applied fields and engineers modelling and solving real physical phenomena can greatly benefit from this work, as well as any reader interested in numerical methods for differential equations.

The Second Edition of Designing Surveys: A Guide to Decisions and Procedures accounts for changes in telephone, Internet, and email surveying and provides a more comprehensive treatment on questionnaire testing. Despite changing technologies, however, the principles of scientific survey design remain unchanged, including the selection of the sample, the writing of questions to solicit an unbiased response, and the ethical treatment of human subjects.

This new edition addresses these issues in the context of new and emerging technologies and their relationship to survey design and the social sciences. Designing Surveys provides an accurate account of how modern survey research is actually conducted, but with the needs and goals of a novice researcher in mind.
