Adaptive hypermedia listening software enables materials writers to combine and deliver a wide range of digital elements on the same digital computer platform more efficiently. Such a combination and delivery provides a multidimensional, multi-sensory digital environment in which rich, efficient, instant, comprehensible, optimum, and meaningful input and feedback can be presented effectively and efficiently. Moreover, language learners ' attention can be drawn to forms and meanings in input. Such aspects correspond with different theories and hypotheses of language learning and teaching. This presents users/learners with an environment that is easy to use, tension-free, and optimal during self-study. However, to be able to design and develop cost effective and professional adaptive hypermedia listening software, there are certain scientific educational findings and implications that need to be implemented at every single stage. To have access to such vital findings is not so easy, and research must address this area. Design Solutions for Adaptive Hypermedia Listening Software explores how to design and create technically and pedagogically sound and efficient interactive adaptive hypermedia listening software for language learners in any language. The chapters will cover learner strategy tools, the effectiveness of this technology, best practices in adaptive hypermedia listening software, and the benefits and challenges of this technology for language learning. It is ideal for companies, institutions, teachers, policymakers, academicians, researchers, advanced-level students, technology developers, and decision-making pertinent government officials interested in designing and developing multimedia listening environments for language learners.

Why Students Can't Focus and What You Can Do About It Basic Books

Residential colleges are the foundation on which US higher education is based. These institutions possess storied traditions fondly

cherished by students, alumni, and faculty. There is no denying, however, that all colleges today struggle with changing consumer preferences, high sticker prices, and aging infrastructure. Technological and pedagogical alternatives—not to mention growing political pressure—present complex challenges. What can colleges and smaller universities do to stay relevant in today's educational and economic climate? In their concise guide, *How to Run a College*, Brian C. Mitchell and W. Joseph King analyze how colleges operate. Widely experienced as trustees, administrators, and faculty, they understand that colleges must update their practices, monetize their assets, and focus on core educational strategies in order to build strong institutions. Mitchell and King offer a frank yet optimistic vision for how colleges can change without losing their fundamental strengths. To survive and become sustainable, they must be centers of dynamic learning, as well as economic engines able to power regional, state, and national economies. Rejecting the notion that American colleges are holdovers from a bygone time, *How to Run a College* shows instead that they are centers of experimentation and innovation that heavily influence higher education not only in the United States but also worldwide.

The studies in this monograph share two common features: a recognition of the intertwined nature of goal and discourse; and a recognition that people typically have more than one goal when they talk with others. It is essential that goals and discourse be conceived of as intertwined concepts: if talk is conceived as essentially a mode of action then these actions will often be taken in the pursuance of objectives. Correspondingly if we assume that people approach many social episodes with specific designs, ambitions, wishes - probably also misgivings and avoidances - then it seems natural to look at talk as at least a potential goal-fulfillment mechanism.

*Communities and Households in the Greater American Southwest* presents new research on human organization in the American Southwest, examining families, households, and communities in the Ancestral Puebloan, Mogollon, and Hohokam major cultural areas, as well as the Fremont, Jornada Mogollon, and Lipan Apache areas, from the time of earliest habitation to the twenty-first century. Using historical data, dialectic approaches, problem-oriented and data-driven analysis, and ethnographic and gender studies methodologies, the contributors offer diverse interpretations of what constitutes a site, village, and community; how families and households organized their domestic space; and how this organization has influenced researchers' interpretations of spatially derived archaeological data. Today's archaeologists and anthropologists understand that communities operate as a multi-level, -organizational, -contextual, and -referential human creation, which informs their understanding of how people actively negotiate their way through and around community constraints. The chapters in this book creatively examine these interactions, revealing the dynamic nature of ancient and modern groups in the American Southwest. The book has two broad complementary themes: one focusing on household decision-making, identity, and structural relations with the greater community; the other concerned with community organization and integration, household roles within the community, and changes in community organization—violence and destabilization, coalescence and cooperation—over time. *Communities and Households in the Greater American Southwest* weaves a rich tapestry of ancient and modern life through innovative approaches that will be of interest not only to Southwestern archaeologists but to all researchers and students interested in social organization at the household and community levels. Based on a totally different way of thinking about, understanding, and acting to increase transfer student success, The Transfer Experience goes far beyond the traditional, limited view of transfer as a technical process simply about articulating credits, a stage of student development, or a novel enrollment management strategy. Rather, the book introduces a stimulating array of new perspectives, resources, options, models, and recommendations for addressing the many needs of this huge cohort – making the academic, civic, and social justice cases for improving transfer at both transfer-sending and transfer-receiving institutions.

How our colleges and universities can respond to the changing hopes and needs of society In recent decades, cognitive psychologists have cast new light on human development and given colleges new possibilities for helping students acquire skills and qualities that will enhance their lives and increase their contributions to society. In this landmark book, Derek Bok explores how colleges can reap the benefits of these discoveries and create a more robust undergraduate curriculum for the twenty-first century. Prior to this century, most psychologists thought that creativity, empathy, resilience, conscientiousness, and most personality traits were largely fixed by early childhood. What researchers have now discovered is that virtually all of these qualities continue to change through early adulthood and often well beyond. Such findings suggest that educators may be able to do much more than was previously thought possible to teach students to develop these important characteristics and thereby enable them to flourish in later life. How prepared are educators to cultivate these qualities of mind and behavior? What do they need to learn to capitalize on the possibilities? Will college faculties embrace these opportunities and make the necessary changes in their curricula and teaching methods? What can be done to hasten the process of innovation and application? In providing answers to these questions, Bok identifies the hurdles to institutional change, proposes sensible reforms, and demonstrates how our colleges can help students lead more successful, productive, and meaningful lives.

The goal of this monograph is to emphasize with empirical data the complexity of the relationship between climate change and violence.

Bioarchaeology is the integration of human skeletal remains from ancient societies with the cultural and environmental context. Information on mortality, disease, diet and other factors provide important data to examine long chronologies of

human existence, particularly during periods of droughts and life-threatening climate changes. Case studies are used to reconstruct the responses and short and long-term adaptations made by groups before, during and after dramatic changes in weather and climate. Interpersonal and group violence is also analyzed. The authors find that while in some cases there is an increase in trauma and violence, in other cases there is not. Human groups are capable of avoiding violent altercations and increasing broad networks of cooperation that help to mitigate the effects of climate change. A case study from the U.S. Southwest is provided that shows the variable and surprising ways that ancient farmers in the past dealt with long term droughts.

Southwest Under Stress examines the development-environment conflict in the four contiguous states of Arizona, Utah, Colorado, and New Mexico. It emphasizes three issues with implications that extend far beyond the Southwest: water---its quantity, quality, and allocation; environment---how and to what extent it should be preserved; and the future of Native American and other poverty-stricken peoples. Energy comes in for special attention because the Southwest is a principal repository of fossil and nuclear fuels. This book serves as a guide for public policy in the region, and many of the policy alternatives set out are aimed at state and local governments. Alleviating poverty, improving the lot of Native Americans, and formulating workable water, environmental, and natural resources development policies are all of

special concern to the region, but the federal government has asserted a dominant role in many of these areas. The book discusses ways in which the federal role may change to improve both federal policy itself and cooperation with other levels of government.
