On low voltage single
conductor cables, generally,
the outer layer is the cables
primary insulating layer. For
medium voltage cables with
damage beyond the outer
jacket such as the copper
tape shield is torn or on low
voltage cables where the
conductor is damaged,
contact your Southwire
Representative.

HS285® | Southwire Overhead
Transmission

Southwire's ACSS/TW is
available in equal area and equal
diameter design. The equal area
design allows equal ampacity in
a smaller diameter conductor
when compared with a standard
ACSS conductor. The equal
diameter design allows more
ampacity in an equal diameter
conductor when compared
with a standard ACSS
conductor.

Southwire Company Conductor
Manual

All Aluminum Conductor Bare
Applications Classes AA and A are
used primarily for overhead
transmission and primary and
secondary distribution, where
ampacity must be maintained and
a lighter conductor (compared to
ACSR) is desired, when
conductor strength is not a critical
factor. Classes B and C are used
primarily as bus, apparatus
connectors, and jumpers,...
