On the Origin of Products DIANE Publishing

In this new work, Arthur O. Eger and Huub Ehlhardt present a 'Theory of Product Evolution'. They challenge the popular notion that we owe the availability of products solely to genius inventors. Instead, they present arguments that show that a process of variation, selection, and accumulation of 'know-how' (to make) and 'know-what' (function to realize) provide an explanation for the emergence of new types of products and their subsequent development into families of advanced versions. This theory employs a product evolution diagram as an analytical framework to reconstruct the development history of a product family and picture it as a graphical narrative. The authors describe the relevant literature and case studies to place their theory in context. The 'Product Phases Theory' is used to create predictions on the most likely next step in the evolution of a product, offering practical tools for those involved in new product development.

Until the Apollo-Soyuz flight of 1972, the Russian Space Program was shrouded in such complete secrecy that only rumors of failures (or catastrophes) reached the West. This comprehensive history of the Russian Space Program, from its Sputnik origins to the privatized Mir Space Station, addresses the technical, political, historical, human, and organizational issues and provides a balanced focus on the manned and unmanned programs. It is the first book to assess the Russian Space Program including the 10-year period since the fall of communism.

Spaces of Hate Springer Science & Business Media
This book is the product of four years of collaborative work within the framework of the European Science Foundation's Regional and Urban Restructuring in Europe (RURE) programme. With one exception, all of the chapters have been prepared by participants in RURE - the exception being that commissioned from Conti and Enrietti on Fiat and Italy to provide a fuller coverage of changes in the main automobile producing companies and countries of Europe. A - perhaps the - central theme around which the RURE programme was conceived is that the restructuring of the production system lies at the heart of the changing map of Europe. Equally, it continues to be the case that the automobile industry lies at the cutting edge of the search for viable new models of production. Some eighty years ago the automobile industry occupied a pivotal position in the transition from craft to mass production - indeed "Fordism" came to denote not just a particular micro-economic model of production organisation in the factory but a macro-scale model of economic development, characterized by a particular pattern of relations between mass production, mass consumption and national state regulation. From the late 1960s, however, it became increasingly clear that Fordism as a macro-scale model of advanced capitalist development was reaching its limits.

The appearance of Oscar Newman's Defensible Space[®] in 1972 signaled the establishment of a new criminological subdiscipline that has come to be called by many Crime Prevention Through Environmental Design[®] or CPTED. Over the years, Mr. Newman's ideas have proven to have significant merit in helping the Nation's citizens reclaim their urban neighborhoods. This casebook will assist public & private organizations with the implementation of Defensible Space theory. This monograph draws directly from Mr. Newman's experience as consulting architect. The Handbook of Polish, Czech, and Slovak Holocaust Fiction aims to increase the visibility and show the versatility of works from East-Central European countries. It is the first encyclopedic work to bridge the gap between the literary production of countries that are considered to be main sites of the Holocaust and their recognition in international academic and public discourse. It contains over 100 entries offering not only facts about the content and motifs but also pointing out the characteristic fictional features of each work and its meaning for academic discourse and wider reception in the country of origin and abroad. The publication will appeal to the academic and broader public interested in the representation of the Holocaust, anti-Semitism, and World War II in literature and the arts. Besides prose, it also considers poetry and theatrical plays from 1943 through 2018. An introduction to the historical events and cultural developments in Poland, Czechoslovakia, Czech, and Slovak Republic, and their impact on the artistic output helps to contextualise the motif changes and fictional strategies that authors have been applying for decades. The publication is the result of long-term scholarly cooperation of specialists from four countries and several dozen academic centres.

Chapter 15 extends the networks section of the book by addressing supply chains, distribution networks and logistics. While the emphasis is on freight transportation, the principles for network design extend to other applications, such as public transportation. Chapters 16 through 18 fall in a new section on transportation economics. Chapter 16 addresses revenue management, a relatively recent topic in transportation, which has had substantial impact on the airline industry in particular. Chapter 17 presents spatial interaction models, which provide a mechanism for analyzing patterns of development.
