CICLing 2004 was the 5th Annual Conference on Intelligent Text Processing and Computational Linguistics; see www.CICLing.org. CICLing conferences are intended to provide a balanced view of the cutting-edge developments in both theoretical foundations of computational linguistics and the practice of natural language text processing with its numerous applications. A feature of CICLing conferences is their wide scope that covers nearly all areas of computational linguistics and all aspects of natural language processing applications. These conferences are a forum for dialogue between the specialists working in the two areas. This year we were honored by the presence of our invited speakers Martin Kay of Stanford University, Philip Resnik of the University of Maryland, Ricardo Baeza-Yates of the University of Chile, and Nick Campbell of the ATR Spoken Language Translation Research Laboratories. They delivered excellent extended lectures and organized vivid discussions. Of 129 submissions received (74 full papers and 44 short papers), after careful international

reviewing 74 papers were selected for presentation (40 full papers and 35 short papers), written by 176 authors from 21 countries: Korea (37), Spain (34), Japan (22), Mexico (15), China (11), Germany (10), Ireland (10), UK (10), Singapore (6), Canada (3), Czech Rep. (3), France (3), Brazil (2), Sweden (2), Taiwan (2), Turkey (2), USA (2), Chile (1), Romania (1), Thailand (1), and The Netherlands (1); the figures in parentheses stand for the number of authors from the corresponding country.

Thinking Spanish Translation
Routledge

Starting from the critical notion that we should be asking questions of contemporary importance - and that 'importance' itself must be defined - Anthony Pym sets about undoing many of the currently dominant models of translation history, positing, among much else, that the object of this history should be translators as people, that researchers are

subjectively involved in their object, that cultural systems are based on social will, that translators work in intercultural spaces, and that a model of cooperation through negotiation may be applied to the way translators (and researchers!) work between cultures. At the same time, the proposed methodology is eminently constructive, showing how many empirical techniques can be developed and applied: clear illustrations are given of corpus selection, working definitions, deceptive statistics, and the construction of networks and regimes, incorporating elaborate examples drawn from medieval and modernist fields, as well as finding space for notes on practical problems like funding research. Finding its focus in historical debates, this book cannot help but create contemporary debate: its arguments seek not only to revitalize the historical study of translation but also to develop the wider concerns of intercultural studies. Learning German: German Short Stories, German Vocabulary, Valuable Basic Knowledge and Phrases from Everyday Life, with English Translations, from Beginner to Advanced John Benjamins Publishing Company

The aim of this volume is to assess Friedrich Schleiermacher's contribution to the theory of translation two centuries after his address "On the Different Methods of Translating" at the Academy of Sciences in Berlin, and to explore its potential for generating future innovative work. For the first time this classic text forms the object of a focused, interdisciplinary approach. Scholars of philosophy and translation, working in English, French and German, provide a close reading of Schleiermacher's lecture and combine their efforts in order to highlight the fundamental role translation

plays in his hermeneutic thinking and the importance of hermeneutics for his theorisation of translation, within the historical and literary context of Romanticism. The various contributions revisit key concepts in Schleiermacher's thought, in particular the famous metaphor of movement; examine the relation between his theoretical writings and his practice as translator of Plato, unearthing some of their philosophical and linguistic implications; discuss Schleiermacher's reception in Germany and abroad; and assess the relevance of his ideas in the beginning of the 21st century as well as their potential to inspire further research in translation and interpreting.

Bachelor Thesis from the year 2014 in the subject Romance Languages -

Spanish Studies, , course: Reseach

Seminar on Translation and

Professional Practice, language:

English, abstract: The purpose of this

thesis is to discover whether the

dichotomy of Ser/Estar in Spanish, in

contrast with the verb To Be in

English, represents not only a

different view of the world of their

speakers, but also a difficulty in the

translation of said verbs. In order to

find an answer, this work was divided

in different sections for a more

comprehensive analysis of all its

variables. First of all, a section

regarding the history of the copulas

and the languages in question was

provided, in order to identify their

origins, development throughout time,

among other factors. The aim of this

analysis was to discover why both

languages differed in their copulas,

given that it would seem English

speakers never found themselves in

the need to make a distinction so

obvious in Spanish. The following step

was an overview of the philosophical value of *ser*, as explained by many well-known thinkers of all periods. The purpose of the overview was to further comprehend a very important difference between *ser* and *estar*, as well as to compare them with their English equivalent. Another subject studied in this section was the importance of language in the construction of reality. This was also important due to the fact that, throughout history, the views regarding the world, the society and people themselves have changed progressively; and said evolution, in turn, affected and was affected by the language. After setting forth these baselines, texts from different periods, both in English and Spanish were analyzed. This served to examine the evolution of the uses and spelling of the three verbs during the different times in history, and corroborate and expand the results found in the first stage of this work. Within this section there was also an analysis of difficult cases regarding the translation of these verbs, taking different popular examples, among which was the famous soliloquy *To be or not to be*. The results obtained provided a framework to find methods to facilitate the translation of *ser*, *estar* and *to be*, both from Spanish into English – which was particularly problematic- and vice versa. It was concluded that even if there were not two separate words in English to represent both Spanish copulas, the language had evolved to provide different resources to make the differences clearer; resources which could be of much use in the translation of problematic cases.

Language for Specific Purposes Lingualism.com

In the United States today there is lively discussion, both among educators and employers, about the best way to prepare students with high-level language and cross-cultural communication proficiency that will serve them both professionally and personally in the global environment of the twenty-first century. At the same time, courses in business language and medical language have become more popular among students. Language for Specific Purposes (LSP), which encompasses these kinds of courses, responds to this discussion and provides curricular models for language programs that build practical language skills specific to a profession or field. Contributions in the book reinforce those models with national survey results, demonstrating the demand for and benefits of LSP instruction. With ten original research-

based chapters, this volume will be of interest to high school and university language educators, program directors, linguists, and anyone looking to design LSP courses or programs in any world language.

This volume provides a sample of the most recent studies on Spanish-English codeswitching both in the Caribbean and among bilinguals in the United States. In thirteen chapters, it brings together the work of leading scholars representing diverse disciplinary perspectives within linguistics, including psycholinguistics, sociolinguistics, theoretical linguistics, and applied linguistics, as well as various methodological approaches, such as the collection of naturalistic oral and written data, the use of reading comprehension tasks, the elicitation of acceptability judgments, and computational methods. The volume surpasses the limits of different fields in order to enable a rich characterization of the cognitive, linguistic, and socio-pragmatic factors that affect codeswitching, therefore, leading interested students, professors, and researchers to a better understanding of the regularities governing Spanish-English

codeswitches, the representation and processing of codeswitches in the bilingual brain, the interaction between bilinguals' languages and their mutual influence during linguistic expression.

The paper describes the development and evaluation of a self-instructional Spanish course designed to produce an elementary communication skill, sufficient to cope with routine situations. The course has 106 printed lessons and associated tapes. There are two novel pedagogic techniques designed to simulate the experience of using the language in a live conversational situation: simulated tutoring lessons and simulated conversation lessons. Nine military personnel with no prior Spanish training completed the course in an average of 73.7 hours. Average scores on the final examination were 73%, 85%, and 78%. Results established the feasibility of building self-instructional foreign language courses to teach useful, elementary, communication skill. (Author).

Handbook of Spanish-English Translation John Benjamins Publishing

This book investigates the political, social, cultural and economic implications of self-translation in multilingual spaces in Europe. Engaging with the 'power turn' in translation studies contexts, it offers innovative perspectives on the role of self-translators as cultural and ideological mediators. The authors explore the unequal power relations and centre-periphery dichotomies of Europe's minorised languages, literatures and cultures. They recognise that the self-translator's double affiliation

as author and translator places them in a privileged position to challenge power, to negotiate the experiences of the subaltern and colonised, and to scrutinise conflicting minorised vs. hegemonic cultural identities. Three main themes are explored in relation to self-translation: hegemony and resistance; self-minorisation and self-censorship; and collaboration, hybridisation and invisibility. This edited collection will appeal to scholars and students working on translation, transnational and postcolonial studies, and multilingual and multicultural identities.

The Handbook of Spanish-English Translation is a lively and accessible book for students interested in translation studies and Spanish. This book details the growth of translation studies from Cicero to postcolonial interpretations of translation as rewriting. It examines through examples the main issues involved in translation and interpretation, such as text types, register, interference, equivalence, and untranslatability. The chapters on interpretation and audiovisual translation and the comparative analysis of Spanish and English are especially significant. The second part of the book offers a rich compilation of diverse Spanish and English texts (academic, literary, and government writings, comic strips, brochures, movie scripts, and newspapers) and their published translations, each with a brief introduction by Professor Aranda.

This is a comprehensive guidebook to the quantitative methods needed for Corpus-Based Translation Studies (CBTS). It provides a systematic description of the various statistical tests used in Corpus Linguistics which can be used in translation research. In Part 1, Theoretical Explorations, the interplay between quantitative and qualitative methodologies is explored. Part 2, Essential Corpus Studies, describes how to undertake quantitative studies, with a suitable level of technical and relevant case studies. Part 3, Quantitative Explorations of Literary Translations, looks at translations of classic works by Cao Xueqin, James Joyce and other authors. Finally, Part 4 on Translation Lexis uses a variety of techniques new to translation studies, including multivariate analysis and game theory. This book is aimed at students and researchers of corpus linguistics, translation studies and quantitative linguistics. It will significantly advance current translation studies in terms of methodological innovation and will fill in an important gap in the development of quantitative methods for interdisciplinary translation studies.

Less Translated Languages Routledge

This volume compiles eight original chapters dedicated to different topics within bilingual grammar and processing with special focus on

code-switching. Three main features unify the contributions to this volume. First, they focus on making a contribution to our understanding of the human language within a coherent theoretical framework; second, they understand that a complete theory of the human language needs to include data from bilinguals' L1-languages; and third, they are committed to obtaining reliable data following experimental protocols.

Discursive Constructions of Consent in the Legal Process
Routledge

This book addresses questions of language education in the United States, focusing on how to teach the 3.5 million students in American public schools who do not speak English as a native language. These students are at the center of a national debate about the right relationship among ESL, bilingual, and mainstream classes. Bilingual education has been banned by constitutional amendment in California and Arizona, and similar amendments are being considered in other states. Language Minority Students in American Schools: An Education in English places this debate and related issues of teaching standard English to speakers of nonstandard dialects, such as black English, within the larger context of language acquisition theory and current methods of language teaching. Adamson draws from the large body of sociolinguistic, psycholinguistic, and educational research, and on his own experience as an English teacher in the U.S. and overseas, to shed light on some of these controversies and on the cognitive, cultural, public policy, and practical issues involved in educating English

language learners. Presenting all sides of the issues fairly, he offers a strong endorsement for bilingual and bidialectical education based on programs designed and administered according to the principles discussed in the book and supported by language acquisition theory and classroom research. A strength of the book is the inclusion of original research conducted in a middle school enrolling a majority of Latino students. This research contributes to the field of language education by providing a detailed description of how English language learners study content subjects. Examples from the study are used to illustrate a discussion of Vygotskian learning principles and the relationship between the students' home and school cultures. Language Minority Students in American Schools: An Education in English is intended for students who are preparing to become teachers of English as a second language, and for teachers of other subjects who work with English language learners.

This is the first collection of articles devoted entirely to less translated languages, a term that brings together well-known, widely used languages such as Arabic or Chinese, and long-neglected minority languages — with power as the key word at play. It starts with some views on English, the dominant language in Translation as elsewhere, considers the role of translation for minority languages — both a source of inequality and a means to overcome it —, takes a look at

translation from less translated major languages and cultures, and ends up with a closer look at translation into Catalan, a paradigmatic case of less translated language, in a final section that includes a vindication of six prominent Catalan translators. Combining sound theoretical insight and accurate analysis of relevant case studies, the contributors to this collection make a convincing case for a more thorough examination of less translated languages within the field of Translation Studies.
