The gap between the center and side electrodes of a spark plug must be an exact distance; otherwise,

your plugs don ' t fire efficiently. Adjusting the distance between the two electrodes is called gapping your spark plugs. You need a feeler gauge to gap your spark plugs properly.

### Sparkplugguide

The gap

measurement will be indicated in thousandths of a inch. For example, a typical plug gap is 0.035, or thirty-five thousandths of an inch. Spark plugs generally produce 10,000 to 30,000 volts of arc between the electrode points.

*Spark Plug Gap Chart - Brisk USA Spark Plugs*

Insufficient spark plug gap can cause pre-ignition, detonation and even engine damage. Too much gap can result in a

higher rate of misfires, loss of power, plug fouling and poor fuel economy. It is always best to check the gap against the manufacturer's specifications.
