1275cc A-Series High-Performance Manual Edward Elgar Publishing

Atmospheric-pressure plasmas continue to attract considerable research interest due to their diverse applications, including high power lasers, opening switches, novel plasma processing applications and sputtering, EM absorbers and reflectors, remediation of gaseous pollutants, excimer lamps, and other noncoherent light sources. Atmospheric-pressure plasmas in air are of particular importance as they can be generated and maintained without vacuum enclosure and without any additional feed gases. Non-Equilibrium Air Plasmas at Atmospheric Pressure reviews recent advances and applications in the generation and maintenance of atmospheric-pressure plasmas. With contributions from leading international researchers, the coverage includes advances in atmospheric-pressure plasma source development, diagnostics and characterization, air plasma chemistry, modeling and computational techniques, and an assessment of the status and prospects of atmospheric-pressure air plasma applications. The extensive application sections make this book attractive for practitioners in many fields where technologies based on atmospheric-pressure air plasmas are emerging.

The objective of this project  
is to develop a low emissions  
natural gas engine. The  
emission targets for this  
project are 0.27 g/kW-hr  
(0.2 g/bhp-hr) of NO<sub>x</sub> and  
0.013 g/kW-hr (0.01 g/bhp-  
hr) of particulate matter. To  
meet the objective, a  
chemically correct  
combustion (stoichiometric)  
natural gas engine with  
exhaust gas recirculation  
(EGR) and a three-way  
catalyst (TWC) was  
developed. In addition, a  
Sturman camless Hydraulic  
Valve Actuation (HVA)  
system was used to improve  
efficiency. A Volvo 11 liter

---

diesel engine was converted to operate as a stoichiometric natural gas engine. Pistons with a 14.3:1 compression ratio were used on this engine. Illustrations. This is a print on demand edition of a hard to find publication.

This cutting-edge book provides a thorough analysis of the transposition of the rules of the EU Damages Directive, examining their impact on the enforcement of competition law and the victim's right to full compensation. It also studies the possible consequences of an anticipated rise in civil damages actions in Europe and how this, in turn, may alter the effectiveness of the enforcement system.

Based on real-life experience and written by expert authors, the books in the Maintenance and Upgrades Manual series from Crowood will help owners develop the workshop skills needed for the maintenance and repair of their cars, and give guidance on possibilities for improvements and upgrades to performance. With step-by-step instructions and safety information throughout, this book is a valuable technical resource for owners of Mk1 and Mk2 Mazda MX-5s. Illustrated with over 700 colour photographs the book covers: tools and safety; weekly routine checks and twice-yearly checks, plus preparing for the MOT test; engine maintenance and tuning; gearbox and differential; brake maintenance and upgrades; uprating the suspension bushes and changing the springs and dampers; bodywork and hood maintenance and finally, what else can you do with an MX-5? Will be of interest to all amateur and professional motor mechanics and is superbly

Honda performance  
enthusiasts all have  
one basic question  
when it comes to  
making their cars  
faster: "What parts  
work, and what parts  
don't?" The only way  
to answer that  
question is to install  
various parts on a car  
and test the power  
output on a  
dynamometer (dyno).

Richard Holdener has  
done that in *High  
Performance Honda Dyno  
Tests*. Holdener's  
extensive testing  
provides dyno-proven  
data for all popular  
Honda performance  
parts, from air intake  
systems to exhausts,  
cams and cylinder  
heads to nitrous,  
turbos, and

superchargers. There is  
even a chapter on  
engine build-ups. In  
addition, dyno tests  
on nearly every Honda  
model, from the single-  
cam DX to the 2.2L  
Prelude, are included.  
Acura models are  
covered as well, from  
the 1.8L LS through  
the GSR and Type R all  
the way up to exotic  
NSX. There is no  
better place to find  
performance answers  
than in this book.

Author Massimo Clarke Media

takes you through all the major components of your motorcycle focusing on subjects such as engine architecture, fuel systems, transmission, and chassis. The detailed text is accompanied by revealing photos and diagrams that illuminate precisely how these systems work. Whether new to motorcycling or a road-seasoned veteran rider, you'll find page after page of fascinating information. Modern Motorcycle Technology is the single reference you'll return to again and again.

*A Law and Economics Analysis* Springer Science & Business Media

This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association

---

of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile

industry, industrial policies in the industry and the spread of development from foreign investors to local firms.
