Self-Help to ICSE Semester 2 Topicwise Revision Physics Book Class 10 (Subjective & Objective Format) John Wiley & Sons

This work was begun quite some time ago at the University of Oxford during the tenure of an Overseas Scholarship of the Royal Commission for the Exhibition of 1851 and was completed at Bangalore when the author was being supported by a maintenance allowance from the CSIR Pool for unemployed scientists. It is hoped that significant developments taking place as late as the beginning of 1965 have been incorporated. The initial impetus and inspiration for the work came from Dr. K. Mendelssohn. To him and to Drs. R. W. Hill and N. E. Phillips, who went through the whole of the text, the author is obliged in more ways than one. For permission to use figures and other materials, grateful thanks are tendered to the concerned workers and institutions. The author is not so sanguine as to imagine that all technical and literary flaws have

been weeded out. If others come across them, they may be charitably brought to the author's notice as proof that physics has become too vast to be comprehended by a single onlooker. E. S. Worked Problems in Heat, Thermodynamics and Kinetic Theory for Physics Students is a complementary to textbooks in physics. This book is a collection of exercise problems that have been part of tutorial classes in heat and thermodynamics at the University of London. This collection of exercise problems, with answers that are fully worked out, deals with various topics. This book poses problems covering the definition of temperature such as calculating the assigned value of the temperature of boiling water under specific conditions. This text also gives example of problems dealing with the first law of thermodynamics and with the definition of thermal capacities. Some practical questions such as problems dealing with thermal engines are presented. This book then discusses problems using the energy equation, as well as asking the student to derive a general equation of state of a material satisfying a specific condition. This text challenges the student to use a T-S diagram to calculate the efficiency of a reversible cycle under certain conditions. Several other problems concern the Joule and Joule-Kelvin effects, low temperature physics, and heat conduction. This review material can be helpful for students of physics, thermodynamics, and related subjects. It can also be used by teachers of physics.
