Ruth Boeker offers a new perspective on Locke's account of persons and personal identity by considering it within the context of his broader philosophical project and the philosophical debates of his day. Emphasizing the importance of the moral and religious dimensions of his view, Boeker argues that, to take seriously Locke's general approach to questions of identity, we should consider his account of personhood separately from his account of personal identity over time. On this basis, she argues that Locke endorses a moral account of personhood, according to which persons are subjects of accountability, and that his particular thinking about moral accountability explains why he regards sameness of consciousness as necessary for personal identity over time. In contrast to some neo-Lockean views about personal identity, Boeker argues that Locke's account of personal identity is not psychological per se, but rather his underlying moral, religious, metaphysical, and epistemic background beliefs are relevant for understanding why he argues for a consciousness-based account of personal identity. Taking his underlying background beliefs into considerations not only sheds light on why many of his early critics do not adopt Locke's view, but also shows why his view cannot be as easily dismissed as some of his critics assume.

Our societies obviously rest on common beliefs. These "myths" are tools that help us to develop and build common identities; they form the structure around which societies function. This does not imply that these beliefs are " true, " in the sense that they would be supported by empirical facts. In social matters, myths have undoubtedly important functions to play even if no empirical facts support them. On the other hand, and precisely because they are not discussed, myths may be problematic: they may create illusions, conserve structures that are inefficient and unable to improve the situation of citizens. This is particularly true with constitutions. Constitutions are very important for societies: a constitution is a document — even in societies based on " unwritten " constitutions — which binds citizens together, creating unity among them, and which forms the framework within which our activities take place. As Nobel Prize laureate James Buchanan used to say: constitutions contain the rules of the social game we play in our everyday life. However, constitutions are not frequently debated by citizens. This is why we end up with common beliefs about these constitutions: they are above our heads, around us. We take them, their role, function, and nature as given. The purpose of this volume to investigate and challenge common constitutional myths. Featuring contributions from prominent economists, political scientists, and legal scholars, the chapters in this volume address such myths as " constitutions are binding social contracts, " " constitutions are economic documents " and " constitutions are legal documents. " Illustrating their analyses with historical and contemporary examples from the United States, Canada, and Europe, the authors build a multi-layered approach to understanding constitutions and their implications for social and political influence.
