The difference between seeing and looking is essential—much like the difference, in music, between hearing and listening. In *Creative Visualization*, master photographer, photo educator and photo instructor Rick Sammon presents his proven methodology for creative digital photography. His signature inspiring and motivating approach opens creative avenues for photographers in a variety of genres. With easy-to-follow examples, Sammon shows you how simple changes—with visualization, composition, post-processing, and more—can mean the difference between a snapshot and a great shot. This book, illustrated with more than 300 of Rick's photographs, includes invaluable information about exposure, composition, subject choice, lighting, mood, and depth. In the Food for Thought section, Rick offers guidelines for setting goals, getting motivated, connecting with a subject, learning, painting with light, thinking like a painter and more. In *Develop Your Creative Vision*, Rick takes you on an

exploration of composition, exposure, making images with impact, creating a mood, altering reality, and pursuing your passion. Corrective and creative image processing techniques, as well as HDR, EDR, panoramas and black-and-white imaging, are covered in the Image Processing Specialties section. Rick also shares a chapter on self-assignments – photo challenges – that you can use to expand your photographic horizons. Canon Explorer of Light and master photographer Rick Sammon shares the secrets behind learning to see photographically, to make the necessary changes that will have a noticeable impact on your photographs. Includes easy-to-follow instruction for post-processing techniques in Lightroom and Photoshop. Tips for making the best HDR and EDR images are also included, as well as illustrations of how plug-ins can help photographers awaken the artist within. Uses clear, visual examples of "photo failures" photographs side-by-side with successful ones, outlining the small, but important changes—to composition, framing, exposure, etc.—that can immediately make a significant difference. *Media Relations* Hal Leonard Corporation Digital War offers a comprehensive overview of the impact of digital technologies upon the military, the media, the global public and the concept of 'warfare' itself. This introductory textbook explores the range of uses of digital technology in contemporary warfare and

conflict. The book begins with the 1991 Gulf War, which showcased post-Vietnam technological developments and established a new model of close military and media management. It explores how this model was reapplied in Kosovo (1999), Afghanistan (2001) and Iraq (2003), and how, with the Web 2.0 revolution, this informational control broke down. New digital technologies allowed anyone to be an informational producer leading to the emergence of a new mode of 'participative war', as seen in Gaza, Iraq and Syria. The book examines major political events of recent times, such as 9/11 and the War on Terror and its aftermath. It also considers how technological developments such as unmanned drones and cyberwar have impacted upon global conflict and explores emerging technologies such as soldier-systems, exo-skeletons, robotics and artificial intelligence and their possible future impact. This book will be of much interest to students of war and media, security studies, political communication, new media, diplomacy and IR in general. *The Science of Poultry and Meat Processing* Oxford University Press, USA

[In Camera: How to Get Perfect Pictures Straight Out of the Camera](#) Osprey Publishing (UK)

This edited collection addresses intimate partner violence, risk and security as global issues. Although intimate partner violence, risk and security are intimately connected they are rarely considered in tandem in the context of global security. Yet, intimate partner violence causes widespread physical, sexual and/or psychological harm. It is the most common type of violence against women internationally and is estimated to affect 30 per cent of women worldwide. Intimate partner violence has received significant attention in recent years, animating political debate, policy and law reform as well as scholarly attention. In bringing together a range of international experts, this edited collection challenges status quo understandings of risk and questions how we can reposition the risk of IPV, and

particularly the risk of IPH, as a critical site of global and national security. It brings together contributions from a range of disciplines and international jurisdictions, including from Australia and New Zealand, United Kingdom, Europe, United States, North America, Brazil and South Africa. The contributions here urge us to think about perpetrators in more nuanced and sophisticated ways with chapters pointing to the structural and social factors that facilitate and sustain violence against women and IPV. Contributors point out that states not only exacerbate the structural conditions producing the risks of violence, but directly coerce and control women as both citizens and non-citizens. States too should be understood as collaborators and facilitators of intimate partner violence. Effective action against intimate partner violence requires sustained responses at the global, state and local levels to end gender inequality. Critical to this end are environmental issues, poverty and the divisions, often along 'race' and ethnic lines, underpinning other dimensions of social and economic inequality.

Civil infrastructure systems are generally the most expensive assets in any country, and these systems are deteriorating at an alarming rate. In addition, these systems have a long service life in comparison to most other commercial products. As well, the introduction of intelligent materials and innovative design approaches in these systems is painfully slow due to heavy reliance on traditional construction and maintenance practices, and the conservative nature of design codes. Feedback on the "state of the health" of constructed systems is practically nonexistent. In the quest for lighter, stronger and corrosion-resistant structures, the replacement of ferrous materials by

high-strength fibrous ones is being actively pursued in several countries around the world, both with respect to the design of new structures as well as for the rehabilitation and strengthening of existing ones. In North America, active research in the design of new highway bridges is focused on a number of specialty areas, including the replacement of steel reinforcing bars in concrete deck slabs by randomly distributed low-modulus fibers, and the replacement of steel prestressing cables for concrete components by tendons comprising super-strong fibers. Research is also being conducted on using FRPs to repair and strengthen existing structures.

The main theme of this year's congress is 'Animal lives worth living'. This theme focuses on our responsibility for all animals kept or influenced by humans, to ensure that we can provide a life for them

that takes into account all relevant aspects of animal welfare, aided by applied ethology as the key scientific discipline. This not only means avoiding and alleviating suffering but also promoting resilience and positive experiences. By monitoring and interpreting animal behaviour, we gain important insights into each of these aspects of quality of life.

This volume brings together the peer-reviewed contributions of the participants at the COST 2102 International Conference on " Cross-Modal Analysis of Speech, Gestures, Gaze and Facial Expressions " held in Prague, Czech Republic, October 15 – 18, 2008. The conference was sponsored by COST (European Cooperation in the Field of Scientific and Technical Research, www.cost.esf.org/domains_actions/ict) in the domain of Information and Communication Technologies (ICT) for disseminating the research advances developed within COST Action 2102: " Cross-Modal Analysis of Verbal and Nonverbal Communication " <http://cost2102.cs.stir.ac.uk>. COST 2102 research networking has contributed to modifying the conventional theoretical approach to the cross-modal analysis of verbal and nonverbal communication changing the concept of face to face communication as well as developing the idea of embodied information. Information is no longer the result of a difference in perception and is no longer measured in terms of quantity of stimuli, since the research developed in COST 2102 has proved that human information processing is a nonlinear process that cannot be seen as the sum of the numerous pieces of information available. Considering simply the pieces of information available, results in a model of the receiver as a mere decoder, and produces a huge simplification of the communication process.

With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.
