This book provides an introduction to the mathematical and algorithmic foundations of data science, including machine learning, high-

dimensional geometry, and analysis of large networks. Topics include the counterintuitive nature of data in high dimensions, important linear algebraic techniques such as singular value decomposition, the theory of random walks and Markov chains, the fundamentals of and important algorithms for machine learning, algorithms and analysis for clustering, probabilistic models for large networks, representation learning including topic modelling and non-negative matrix factorization, wavelets and compressed sensing. Important probabilistic techniques are developed including the law of large numbers, tail inequalities, analysis of random projections, generalization guarantees in machine learning, and moment methods for analysis of phase transitions in large random graphs. Additionally, important structural and complexity measures are discussed such as matrix norms and VC-dimension. This book is suitable for both undergraduate and graduate courses in the design and analysis of algorithms for data.

Meredith and David Liben have spent decades transforming education, working as teachers, researchers, leaders, and founders of an alternative public elementary school in Harlem—the Family Academy. The Libens have been on the front lines of the reading wars since 1994, when the Family Academy's first cohort of students failed the NYC end of year reading exam and they were confronted with the question: How can a school with plenty of resources, dedication to outstanding instruction, and support for social and emotional learning fail so spectacularly at teaching children how to read? The answers are collected here in *Know Better, Do Better: Teaching the Foundations So Every Child Can Read*. The Libens have poured through the research, pedagogical movements, and

deeply entrenched classroom myths to find the literacy practices and instructional materials that actually improve student learning outcomes. Through their work, the Family Academy reading scores rose to the highest of any non-"gifted" school in Harlem. The best of intentions aren't enough to make children literate; educators have to know better so they can do better. *The Insider's Guide to Technical Writing* Educators Publishing Service, Incorporated Teaches the meaning of scientific findings about learning to read and reading instruction. The modules address each component of reading instruction and the foundational concepts that link these components. Equipped for Reading Success Teaching

Well established as a clear, comprehensive course text in five prior editions, this book has now been extensively revised, with a focus on disciplinary literacy. It offers a research-based framework for helping students in grades 6-12 learn to read, write, and communicate academic content and to develop the unique literacy, language, and problem-solving skills required by the different disciplines. In an engaging, conversational style, William G. Brozo

presents effective instruction and assessment practices, illustrated with extended case studies and sample forms. Special attention is given to adaptations to support diverse populations, including English language learners. (Prior edition title: Content Literacy for Today's Adolescents, Fifth Edition.) New to This Edition: *Shift in focus to disciplinary literacy as well as general content-area learning. *Chapter on culturally and linguistically diverse learners. *Incorporates a decade of research and the goals of the Common Core State Standards. *Increased attention to academic vocabulary, English language learners, the use of technology, and multiple text sources,

such as graphic novels and digital texts. *Pedagogical features: chapter-opening questions plus new case studies, classroom dialogues, practical examples, sample forms, and more.

“Wolf restores our awe of the human brain—its adaptability, its creativity, and its ability to connect with other minds through a procession of silly squiggles.” — San Francisco Chronicle How do people learn to read and write—and how has the development of these skills transformed the brain and the world itself ?

Neuropsychologist and child development expert Maryann Wolf answers these questions in this ambitious and provocative book that chronicles the remarkable journey of written language not only throughout our evolution but also over the course of a single child’s life, showing why a growing percentage have difficulty mastering these abilities. With fascinating down-to-earth examples and lively personal anecdotes, Wolf asserts that the brain that examined the tiny clay tablets of the Sumerians is a very different brain from the one that is immersed in today’s technology-driven literacy, in which visual images on the screen are paving the way for a reduced need for written language—with potentially profound consequences for our future.

Speech to Print John Wiley & Sons

The first completely comprehensive, practical guide for recognizing, diagnosing, and overcoming any childhood reading difficulty. According to the National Institute of Health, ten million of our nation's children (approximately 17 percent) have trouble learning to read. While headlines warn about the nation's reading crisis, Susan Hall (whose son was diagnosed with dyslexia) and Louisa Moats have become crusaders for action. The result of their years of research and personal experience, *Parenting a Struggling Reader* provides a revolutionary road map for any parent facing this challenging problem. Acknowledging

that parents often lose valuable years by waiting for their school systems to test for a child's reading disability, Hall and Moats offer a detailed, realistic program for getting parents actively involved in their children's reading lives. With a four-step plan for identifying and resolving deficiencies, as well as advice for those whose kids received weak instruction during the crucial early years, this is a landmark publication that promises unprecedented hope for the next generation of Information Age citizens. Teaching Reading Sourcebook Dunmore Publishing

Reading problems don't disappear when students enter middle school, recent studies show that nearly a quarter of today's eighth graders aren't able to read at a basic level.

This book arms language arts teachers with lessons, strategies, and foundational knowledge they need to resolve older students' reading difficulties and increase their chances for academic success. Ideal for use with struggling readers in Grades 6 - 8, this book clearly lays out the fundamentals of effective teaching for adolescents with reading difficulties. Teachers will discover how to: select and administer assessments for comprehension, fluency, and word recognition; use assessment results to plan individualized instruction; apply research-supported instructional practices; develop flexible grouping systems; set manageable short-term learning goals with students; give appropriate and corrective feedback; monitor student progress over time; provide effective interventions within a school-wide Response to Intervention framework; and more. To help teachers incorporate evidence-based practices into their classroom instruction they'll get more

than 20 complete, step-by-step sample lessons for strengthening adolescents' reading skills. Easy to adapt for use across any curriculum, the sample lessons provide explicit models of successful instruction, with suggested teacher scripts, checklist for planning instruction, key terms and objectives, strategies for guided and independent practice, tips on promoting generalization, and more.

Why are so many American children learning so much misinformation about climate change? Investigative reporter

Katie Worth reviewed scores of textbooks, built a 50-state database, and traveled to a dozen communities to talk to children and teachers about what is being taught, and found a red-blue divide in climate education. More than one-third of young adults believe that climate change is not man-made, and science teachers who teach global warming are being contradicted by history teachers who tell children not to worry about it. Who has tried to influence what children learn, and how successful have they been? Worth connects the dots to find out how oil corporations, state legislatures, school boards, and textbook publishers sow uncertainty, confusion, and distrust about climate science. A thoroughly researched, eye-opening look at how some states do

not want children to learn the facts about climate change.
