Plains Indians have long occupied a special place in the American imagination. Both the historical reality of such evocative figures and events as Crazy Horse, Sitting Bull, Sacajewea, and the Battle of Little Bighorn and the lived reality of Native Americans today are often confused and conflated with popular representations of Indians in movies, paintings, novels, and on television. Ingrained stereotypes and cultural misconceptions born of late nineteenth- and early twentieth-century images of the romantic nomad and the marauding savage have been surprisingly tenacious, obscuring the extraordinary cultural and linguistic diversity of the dozens of tribes and nations who have peopled the Great Plains. Here in one volume is an indispensable guide to the extensive ethnohistorical research that, in recent decades, has recovered the varied and often unexpected history of Comanche, Cheyenne, Osage, and Sioux Indians, to name only a few of

the tribal groups included. From the earliest archaeological evidence to the current experience of Indians living on and off reservations, a wealth of information is presented in a clear and accessible way. The history of the Plains Indians has been a dynamic one of continuous change and adaptation as groups split and recombined to form new social orders and cultural traditions. Contact with Europeans and the introduction of trade in horses, slaves, furs, and guns dramatically altered native societies internally and influenced relations between different groups. In the face of pressures resulting from America's westward expansion throughout the nineteenth and twentieth centuries—the extinction of the bison, the imposition of reservation life, and the assimilationist policies of the U.S. federal government—the native peoples of the Great Plains have struggled to preserve their distinct cultures and reorient themselves to a new world on their own terms. The Columbia Guide to American Indians of the Great Plains is divided into four parts. Part I

presents an overview of the cultures and histories of Plains Indian people and surveys the key scholarly questions and debates that shape this field. Part II serves as an encyclopedia, alphabetically listing important individuals and places of significant cultural or historic meaning. Part III is a chronology of the major events in the history of American Indians in the Plains. The expertly selected resources guide in Part IV includes annotated bibliographies, museum and tribal Internet sites, and films that can be easily accessed by those wishing to learn more. The third in a six-volume reference series, *The Columbia Guides to American Indian History and Culture*, *The Columbia Guide to American Indians of the Great Plains* is an invaluable resource for students, teachers, and researchers.

In the 1960s, a group of University of Melbourne Science and Engineering students and one

Law student banded together to build a satellite in their spare time. You are invited to the launch of a book that records the journey of those students as they built Australis OSCAR 5 and had it launched into orbit by NASA in January 1970. Australis operated successfully for nearly two months before its batteries ran out. It was the first satellite built in Australia and achieved a number of important technical milestones, including over a dozen world firsts. Then, nearly fifty years later, another group of students, also from the University of Melbourne decided that they too would build a small satellite. Operating in a very different technical, social and regulatory

environment and with remarkably similar goals, the team built their cubesat. As if to celebrate the anniversary year of Australis' launch in 1970, ACRUX-1 was launched from New Zealand in 2019.

New approaches to understanding war and peace in the changing international system. What causes war? How can wars be prevented? Scholars and policymakers have sought the answers to these questions for centuries. Although wars continue to occur, recent scholarship has made progress toward developing more sophisticated and perhaps more useful theories on the causes and prevention of war. This volume includes essays by leading scholars on contemporary

approaches to understanding war and peace. The essays include expositions, analyses, and critiques of some of the more prominent and enduring explanations of war. Several authors discuss realist theories of war, which focus on the distribution of power and the potential for offensive war. Others examine the prominent hypothesis that the spread of democracy will usher in an era of peace. In light of the apparent increase in nationalism and ethnic conflict, several authors present hypotheses on how nationalism causes war and how such wars can be controlled. Contributors also engage in a vigorous debate on whether international institutions can promote peace. In a section on war and peace in the changing international system, several authors consider whether rising levels of international economic independence and

environmental scarcity will influence the likelihood of war.

NEW YORK TIMES BESTSELLER • The knockdown, drag-out, untold story of the other scandal that rocked Nixon ' s White House, and reset the rules for crooked presidents to come—with new reporting that expands on Rachel Maddow ' s Peabody Award – nominated podcast “ Both a thriller and a history book, Bag Man is a triumph of storytelling. ” —Preet Bharara, New York Times bestselling author of *Doing Justice* and host of the podcast *Stay Tuned with Preet* Is it possible for a sitting vice president to direct a vast criminal enterprise within the halls of the White House?

To have one of the most brazen corruption scandals in American history play out while nobody ' s paying attention? And for that scandal to be all but forgotten decades later? The year was 1973, and Spiro T. Agnew, the former governor of Maryland, was Richard Nixon ' s second-in-command. Long on firebrand rhetoric and short on political experience, Agnew had carried out a bribery and extortion ring in office for years, when—at the height of Watergate—three young federal prosecutors discovered his crimes and launched a mission to take him down before it was too late, before Nixon ' s impending downfall elevated Agnew to the presidency. The self-described “ counterpuncher ” vice president did everything he could to bury their investigation: dismissing it as a “ witch hunt, ” riling up his partisan base, making the press the enemy, and, with a crumbling circle of loyalists,

scheming to obstruct justice in order to survive. In this blockbuster account, Rachel Maddow and Michael Yarvitz detail the investigation that exposed Agnew ' s crimes, the attempts at a cover-up—which involved future president George H. W. Bush—and the backroom bargain that forced Agnew ' s resignation but also spared him years in federal prison. Based on the award-winning hit podcast, Bag Man expands and deepens the story of Spiro Agnew ' s scandal and its lasting influence on our politics, our media, and our understanding of what it takes to confront a criminal in the White House.

Parallelization in Inference Systems Columbia University Press

This text focuses on general concepts, theory, and research on teaching, learning, and technology rather than on hands-on assignments at the computer. This book is most suitable for courses

where students already have basic computing skills and the focus is on issues of integration of technology in the classroom, or for courses where computing skills are taught simultaneously with the concepts, issues, and theories of integration. This text is geared toward answering the question: "What would a teacher do differently if she/he used computers in her/his classroom?" The book links actual practice to underlying theories of both teaching and learning. It helps students develop their own framework for thinking about educational computing.

Reading at a Crossroads? CRC Press

This volume consists of the papers accepted for presentation at the second international workshop on Programming Language Implementation and Logic Programming (PLILP '90) held in Link ö ping, Sweden, August 20-22, 1990. The aim of the workshop was to identify

concepts and techniques used both in implementation of programming languages, regardless of the underlying programming paradigm, and in logic programming. The intention was to bring together researchers working in these fields. The volume includes 26 selected papers falling into two categories. Papers in the first category present certain ideas from the point of view of a particular class of programming languages, or even a particular language. The ideas presented seem to be applicable in other classes of languages. Papers in the second category directly address the problem of integration of various programming paradigms. The proceedings of the predecessor workshop PLILP '88, held in Orléans, France, May 16-18, 1988, are available as Lecture Notes in Computer Science, Vol. 348. Copernicus

This volume contains the proceedings of an international workshop on parallelism in inference systems held in Germany in December 1990. The topic of the workshop is still rather young and several papers in the book are overview articles intended to provide a first orientation toward some of the more intensively investigated subtopics. The main part of the book is a compilation of research papers on parallelization in special domains of inference such as rewriting, automatic reasoning, logic programming, and connectionist inference. Appended to the book is a collection of short project summaries received in response to a worldwide email call. The book is intended

primarily for researchers working on inference systems who are interested in parallelizing their systems.

In this updated and expanded second edition, Keith Potts and Nii Ankrah examine key issues in construction cost management across the building and civil engineering sectors, both in the UK and overseas. Best practice from pre-contract to post-contract phases of the project life-cycle are illustrated using major projects such as Heathrow Terminal 5, Crossrail and the London 2012 Olympics as case studies. More worked examples, legal cases, case studies and current research have been introduced to cover every aspect of the cost manager ' s role. Whole-life costing, value management, and risk management are also addressed, and self-test

questions at the end of each chapter support independent learning. This comprehensive book is essential reading for students on surveying and construction management programmes, as well as built environment practitioners with cost or project management responsibilities.

The Internet is transforming the experience of reading and learning-through-reading. Is this transformation effecting a radical change in reading processes as readers synthesize understandings from fragments across multiple texts? Or, conversely, is the Internet merely a new place to use the same reading skills and processes developed through experience with traditional print-based media? Are the changes in reading processes a matter of degree, or are they fundamentally new? And if so, how must reading

theory, research, and instruction adjust? This volume brings together distinguished experts from the fields of reading research, teacher education, educational psychology, cognitive science, rhetoric and composition, digital humanities, and educational technology to address these questions. Every question is not answered in every chapter. How could they be? But every contributor has many thoughtful things to say about a subset of these important questions. Together, they add up to a comprehensive response to the issues the field faces as it approaches what may well be—or not—a crossroads. "What we know about teaching Teenagers", 2019 I would like to thank Dr. Richard NeSmith for helping me know more about what goes through teenagers' minds and grow into a better teacher. Dr. NeSmith's 28-plus years of teaching experience and careful study of biology, developmental and cognitive psychology make him one of the best experts in the field. His book explains the difficulties students have learning at school and reflects on how to overcome them, promoting a better understanding of the changes going on in teenagers' lives as well as an elementary understanding of what causes pain points in the brain of the adult-in-the-making. Above all, Dr. NeSmith reminds us that teenagers are individuals, with their personality, strengths, weaknesses, and their ways of showing love and concern. The book has been carefully researched and will make you aware of the cognitive-

emotional interactions going on inside the mind of NOT a checklist, it is a strategy that empowered preadolescents to improve your teaching strategies. It is such a privilege to teach and take teenagers from childhood to adulthood. Whether you are a parent, a teacher, or a school administrator you will find in this book strategies to facilitate learning and encourage lifelong learning. =====

===== A research-based book addressing brain-based learning and how secondary age students best learn and how teachers can best teach to meet those needs. American public education is on life support like never before. Why? The shift from LEARNING to standardized testing, ticking boxes for administrators, and watering down curricula are some of the reasons. This synthesis of brain-based research emphasizes how students best learn. It is

teachers can utilize to improve student learning. But, knowing how teens think enables teachers to know HOW TEENS best LEARN. --Dr. Richard NeSmith

This book lays the foundations of the theory of fluctuating multivalued fields with numerous applications. Most prominent among these are phenomena dominated by the statistical mechanics of line-like objects, such as the phase transitions in superfluids and superconductors as well as the melting process of crystals, and the electromagnetic potential as a multivalued field that can

produce a condensate of magnetic monopoles. In addition, multivalued mappings play a crucial role in deriving the physical laws of matter coupled to gauge fields and gravity with torsion from the laws of free matter. Through careful analysis of each of these applications, the book thus provides students and researchers with supplementary reading material for graduate courses on phase transitions, quantum field theory, gravitational physics, and differential geometry.

University of Chicago has been the home of some of the most important thinkers of the modern age. But perhaps no name has been spoken with more respect than Turabian. The dissertation secretary at Chicago for decades, Kate Turabian literally wrote the book on the successful completion and submission of the student paper. Her *Manual for Writers of Research Papers, Theses, and Dissertations*, created from her years of experience with research projects across all fields, has sold more than seven million copies since it was first published in 1937. Now, with this seventh edition, Turabian's *Manual* has undergone its most extensive revision, ensuring that it will remain the most valuable handbook for writers at every level—from first-year undergraduates, to dissertation writers apprehensively submitting final manuscripts, to senior scholars who may be old hands at research and writing but less familiar with new media citation styles. Gregory G. Colomb, Joseph M. Williams, and the late Wayne C. Booth—the gifted team behind *The Craft of Research*—and the University of Chicago Press Editorial Staff combined their wide-ranging expertise to remake this classic resource. They preserve Turabian's clear and practical advice while fully embracing the new modes of research, writing, and source citation brought about by the age of the Internet. Booth, Colomb, and Williams significantly expand the scope of previous editions by creating a guide, generous in length and tone, to the art of research and writing. Growing out of the authors' best-selling *Craft of Research*, this new section provides students with an overview of every step of the research and writing process, from formulating the right questions to reading critically to building arguments and revising drafts. This leads naturally to the second part of

the *Manual for Writers*, which offers an authoritative overview of citation practices in scholarly writing, as well as detailed information on the two main citation styles (“ notes-bibliography ” and “ author-date ”). This section has been fully revised to reflect the recommendations of the fifteenth edition of *The Chicago Manual of Style* and to present an expanded array of source types and updated examples, including guidance on citing electronic sources. The final section of the book treats issues of style—the details that go into making a strong paper. Here writers will find advice on a wide range of topics, including punctuation, table formatting, and use of quotations. The appendix draws together everything writers need to know about formatting research papers, theses, and dissertations and preparing them for submission. This material has been thoroughly vetted by

dissertation officials at colleges and universities across the country. This seventh edition of *Turabian ’ s Manual for Writers of Research Papers, Theses, and Dissertations* is a classic reference revised for a new age. It is tailored to a new generation of writers using tools its original author could not have imagined—while retaining the clarity and authority that generations of scholars have come to associate with the name *Turabian*.
