The Evolution engine (popularly known as Evo) is an air-cooled, 45-degree, V-twin engine manufactured from 1984 by Harley-Davidson for the company's motorcycles. It was made in the 1,340 cc (82 cu in) displacement for Harley-Davidson Big V-twins bikes, replacing the Shovelhead engine until 2000 when the last EVO was placed in a production factory custom FXR4 (FXR2 and FXR3 were the first CVOs ).

The biggest change was an all-new frame with rubber engine mounting to lessen vibrations, designed using what Eric Buell had taught them with his Sportster powered sport bikes. With the new frame came a smoother oil tank, with the trick push and turn cap, and a battery hidden on the other side for a cleaner look.

[Sportster History \(1980-1985\)](#) While the 1980's brought us high-revving, multi-cylinder motorcycles with 10,000 red-lines, the Harley-Davidson Sportster was still getting it done at 5,500 rpm.

Accelerating anywhere above 2,000 rpm, down-shifting was not really necessary.

Sportster engines changed from the old type 4 or 5 to the new 4R5. The original 4R5 still had the 4-5 markings, but carried a black terminal at the end to distinguish it as the new resistor type plug until the supply ran out.

[A brief history of the Harley-Davidson Evolution Engine ...](#)

Sportster motorcycles are powered by a four-stroke, 45° V-twin engine in which both connecting rods, of the "fork and blade" or "knife & fork" design, share a common crank pin. The original Sportster engine was the Ironhead engine, which was replaced with the Evolution engine in 1986.
