Science and Technology explores questions around the central concepts of STEM fields: How do we interact with science and technology on a daily basis? Is technology surpassing biology? What are the ethics of science and technology? Does technology rule our economy? How is the internet changing

society? Readings by biologists, climate scientists, journalists, ethicists, novelists, engineers, and others take up these questions and more. Questions and assignments for each selection provide a range of activities for students. The Bedford Spotlight Reader Series is an exciting line of single-theme readers, each reflecting Bedford's trademark care and quality. An editorial board of a dozen compositionists at schools with courses focusing on specific themes assists in the development of the series. Each reader collects thoughtfully chosen selections sufficient for an entire writing course—about 35 pieces—to allow instructors to provide carefully developed, high-quality instruction at an affordable price. Bedford Spotlight Readers are designed to help students from all majors make sustained inquiries from multiple perspectives, opening up topics such as borders, food, gender, happiness, humor, language, monsters, music, subcultures, and sustainability, to critical analysis. The readers are flexibly arranged in thematic chapters, with each chapter focusing in depth on a different facet of the central topic. The instructor resource tab of each reader's catalog page includes instructor support with sample syllabi and additional teaching resources.

In the last few years, the focus of the training of science teachers has shifted significantly towards the school based experience. Drawing on the successful Oxford University science internship scheme, this book presents insights of mentoring from several perspectives, providing a rich resource of case study material. After introductory chapters dealing with the rationale for the science internship course, the reader is presented with: logs of mentors' and students' experiences that offer 'windows' onto the mentoring process at different stages in the PGCE course; cameos of students who have been at the centre of a range of complex training situations; reflections of past PGCE students; and accounts of the experiences of heads of science departments when managing the placement of science PGCE students in their schools.

An easy way to meet the language arts standards! For use with Grades 4-8.

Curriculum Review Nelson Thornes

Each double-page spread provides a complete teaching unit of about one hour. The illustrations are in full colour and are always shown close to the relevant text. The reading age of the sentences and the number of words on a page have been carefully controlled. The sentence structure is simple, accessible and friendly, with clear personalised questions. The pages are carefully designed to show the pupils a very clear route through each spread. Every page has a 'Things to do' section of questions. These are useful for homework, or as extra work for faster students, or for work during staff absence.
