Get the most return on investment from your garden by calculating which vegetables, fruits, and herbs give the highest payback. To make the selection process of what to grow easy, Mel Bartholomew -- author of the best-selling Square Foot Gardening -- has a new book to maximize your garden's return on investment. High-Value Veggies is an easy-to-use reference book that will help you choose edibles that make the most financial and spatial sense for your space. Explore the thought processes and math behind growing vegetables and herbs in order to craft the best plan for you. Maximizing your garden's yield is no simple task. Consider the tomato; most people think it's a safe bet for a high-yield return - but which variety? Heirloom tomatoes typically cost \$5 or more a pound at farmers' markets. You can beat that price by growing Cherokee Purples from seed at a net cost of only 80 cents per pound. If you plant purchased seedlings, the cost will go up to about \$1 a pound -- and that's including the cost of water and fertilizer. This is the kind of invaluable data and advice you can trust High-Value Veggies to provide. Whether you're interested in growing tomatoes, pumpkins, cabbage, corn, or anything else, it's wise to consider the invisible dollar signs sown along the way. The relative return on investment for each veggie in High-Value Veggies is calculated based on dollar value generated for each square foot planted. You don't need to be a math whiz to plan your next vegetable garden. Bartholomew has done the math for you, and he has cost-effective answers.

Do you know what the best feature is in All New Square Foot Gardening? Sure, there are ten new features in this all-new, updated book. Sure, it's even simpler than it was before. Of course, you don't have to worry about fertilizer or poor soil ever again because you'll be growing above the ground. But, the best feature is that "anyone," "anywhere" can enjoy a Square Foot garden. Children, adults with limited mobility, even complete novices can achieve spectacular results. But, let's get back to the ten improvements. You're going to love them. 1) New Location - Move your garden closer to your house by eliminating single-row gardening. Square Foot Garden needs just "twenty percent" of the space of a traditional garden. 2) New Direction - Locate your garden "on top" of existing soil. Forget about pH soil

tests, double-digging (who enjoys that?), or the never-ending soil improvements.3) New Soil - The new "Mel's Mix" is the perfect growing mix. Why, we even give you the recipe. Best of all, you can even "buy" the different types of compost needed.4) New Depth - You only need to prepare a SFG box to a depth of 6 inches! It's true--the majority of plants develop just fine when grown at this depth.5) No Fertilizer - The all new SFG does not need any fertilizer-ever! If you start with the perfect soil mix, then you don't need to add fertilizer.6) New Boxes - The new method uses bottomless boxes placed aboveground. We show you how to build your own (with step-by-step photos).7) New Aisles - The ideal gardening aisle width is about three to four feet. That makes it even easier to kneel, work, and harvest.8) New Grids - Prominent and permanent grids added to your SFG box help you visualize the planting squares and know how to space for maximum harvest.9) New Seed Saving Idea - The old-fashioned way advocates planting many seeds and then thinning the extras (that means pulling them up). The new method means planting a pinch- literally two or three seeds--per planting hole.10) Tabletop Gardens - The new boxes are so much smaller and lighter (only 6 inches of soil, remember?), you can add a plywood bottom to make them portable. Of course, that's not all. We've also included simple, easy-to-follow instructions using lots of photos and illustrations. You're going to love it!
