[Textbook of Surgery for Dental Students](#) Open Hand Publishing, LLC

Written by a pioneering leader in the development of vitreoretinal surgical techniques and instruments, Vitreous Microsurgery is a comprehensive how-to guide to all vitreoretinal procedures. This thoroughly updated Fifth Edition describes many new techniques and refinements of established procedures. More than 170 three-dimensional full-

color illustrations—many by the Charles Retina Institute's resident medical artist, Byron Wood—enable surgeons to clearly visualize the techniques. This edition has new chapters on the Constellation vitrectomy system, uveitis, retinal complications of permanent keratoprosthesis, and anti-VEGF therapy and completely rewritten chapters on anesthesia and on retinopathy of prematurity. All illustrations have been updated, the majority to a 25-gauge approach instead of 20-gauge, and many new illustrations have been added. Many techniques and parameters unique to 25-gauge sutureless vitrectomy are discussed in detail. A companion website offers the fully searchable text and an image bank.

This book does not

attempt to rival major surgical textbooks, but draws together a collection of basic information in a convenient format. It provides a transition in knowledge between the basic sciences and clinical practice. Emphasis is placed on the general principles of surgery rather than on management of specific conditions and thus this title complements the standard clinical surgical textbooks. Essential Surgery is a
comprehensive and highly
illustrated textbook for
clinical students as well as a
practical manual for junior
doctors and those preparing
for postgraduate
qualifications in surgery. The
unique feature of the book is
its problem-orientated nature
as distinct to the traditional
disease-based structure.
Explains the
pathophysiological basis of
surgical diseases and of their

management to help bridge
the gap between the basic
medical sciences and clinical
problems. Adopts a problem-
solving rather than a disease-
orientated approach to
diagnosis and treatment,
reflecting current teaching
trends which emphasise the
full understanding of how a
diagnosis is made and why a
particular treatment is used.
Includes information about
epidemiology, disease
prevention and the provision
of health care, and tries to
relate the community aspects
of surgical problems to
aetiology, disease prevention
and primary care. Contains
outlines of common surgical
operations, to enable students
and junior doctors to explain
operations to patients and to
allow them to participate
intelligently in the operating
department, as well as giving
them an understanding of

how to prevent complications. Includes a major section on accident surgery related to the general surgeon. Now with full text online on Student Consult. Comprehensively updated in line with the evolution and refinement of surgery over the past few years, by an expanded author team and an advisory group of surgical and radiological experts. All line drawings represented for greater impact and clarity. All radiological images reviewed and updated. Includes a new chapter on screening. The history of modern medicine is inseparable from the history of imperialism. Medicine and Empire provides an introduction to this shared history – spanning three centuries and covering British, French and Spanish imperial histories in Africa, Asia and America. Exploring the major developments in European medicine from the seventeenth century to the mid-twentieth century, Pratik Chakrabarti shows that the major developments in European medicine had a colonial counterpart and were closely intertwined with European activities overseas: - The increasing influence of natural history on medicine - The growth of

European drug markets - The rise of surgeons in status - Ideas of race and racism - Advancements in sanitation and public health - The expansion of the modern quarantine system - The emergence of Germ theory and global vaccination campaigns Drawing on recent scholarship and primary texts, this book narrates a mutually constitutive history in which medicine was both a 'tool' and a product of imperialism, and provides an original, accessible insight into the deep historical roots of the problems that plague global health today. *SAQs, MCQs, EMQs and OSCEs for MRCOG Part 2, Second edition* CBS Publishers & Distributors Private Limited This sixth edition, of nearly 1300 pages, is a

Essential Surgery SAGE

Approaching his forty-first birthday, Dr. Geoffrey Kurland was a busy man. His work as a Pediatric Pulmonologist , caring for

children with lung diseases such as cystic fibrosis and asthma, led to long hours on the wards at the University of California, Davis Medical Center. At the same time, he was in the midst of training for the Western States Endurance Run, a grueling 100-mile long footrace across the wilderness of the Sierra Nevada Mountains. His long training runs, the responsibilities of patient care and teaching, and relationships attempting to replace his departed girlfriend occupied most of his life. Dr. Kurland's ordered world is suddenly turned upside-down when he is diagnosed with Hairy Cell Leukemia, a rare blood cancer with a low survival rate. His work, his running, and his friendships are altered by his struggle to survive. He finds he must undergo many of the procedures he performed on his patients, must endure surgery and chemotherapy, and

must relinquish control of his life to his physicians, surgeons, and his disease. He learns firsthand what cannot be taught in medical school about the consuming power of a chronic illness and its treatment. Confronting his own mortality, Dr. Kurland is now the patient while remaining a physician and runner. With the support of his physicians at the Mayo Clinic, the University of California, and the University of Pittsburgh, he resolves to continue to live his life despite his potentially fatal disease. He discovers his personal inner strengths as well as weaknesses as he struggles to confront his illness and regain some of the control he lost to it. Along his nearly two and a half year journey, we follow Dr. Kurland as he endures surgical procedures, chemotherapy, and life-threatening complications of his illness. He emerges into remission with new inner

strength and understanding of what it means to be a doctor. He also finds that he is still a runner, with the same goal, to run the 100 miles across the Sierra Mountains. PRAISE: "Taut, dramatic, and intensely real...Very well written." —Oliver Sacks, bestselling author of *Seeing Voices* and *Hallucinations* "[My Own Medicine] should be required reading for every medical professional. Kurland never asks for sympathy or pity...What comes through powerfully is his humanity, which his own bout with illnesses has clearly enhanced, and from which both his patients and his readers will benefit." —The New York Times "While training as a pediatric pulmonologist, Kurland told a patient, 'I know how you feel'; years later, when he was diagnosed with a rare form of leukemia, he discovered just how untrue this was...The way in which serious

illness alters one's sense of self and of life is compellingly expressed in this energetic, nervy narrative, as Kurland's illness and eventual recovery collide with a host of profound shifts—a big career move, the death of a colleague, an unravelling relationship with his girlfriend, and a deepening one with his parents." —The New Yorker

A Text Book of Medical Instruments Elsevier Health Sciences

The development of a sociology of medical knowledge is both assessed and contributed to in *Medical Talk and Medical Work*. Underlying the analysis is research on the work of haematologists, which offers a rich resource for understanding the complexities and contradictions between physical bodies and social embodiment, medical talk and technical apparatus. Using but moving beyond this specific material, Paul Atkinson demonstrates the strengths and weaknesses of the existing understanding of

medical knowledge. Among the issues explored are: the place of interaction among doctors, rather than between doctors and patients, in defining the construction of medical knowledge; the ways in which clinical opinion is socially produced and the nature of the local settings through which this process occurs; and the relations among medical knowledge, medical language and the increasingly technological contexts of contemporary medical practice.
