This edition of the SAGES Manual of Hernia
Surgery aligns with the current version of the
new SAGES University MASTERS Program
Hernia Surgery pathway. This manual serves
as a curriculum for participants in the
MASTERS Program as well as a modern text
on hernia surgery for all learners. Hernia

surgery is one of the fastest developing fields in
general surgery today. There have been rapid
advancements in hernia techniques in recent
years, making most prior texts on the subject
obsolete. These advancements involve
significant evolution in both the techniques and
strategies for hernia repairs, as well as the tools
used to achieve these means. This text
thoroughly addresses the multiple component
separation techniques and options for locations
of mesh repairs. It also discusses the revolution
of hernia repair being facilitated by robotic
surgery, which allows increased access to
minimally invasive techniques for surgeons and
thus increased access to minimally invasive
surgical repairs for patients. This manual will
be a valuable resource for interested surgeons
to understand the variety of potential
approaches to individual hernias, and to
individually tailor the care of the hernia patient.
