In the analysis of
retaining walls
subjected to earth
pressure, it is very
common to observe
trapezoidal load
distribution on the
walls. Normally,
earth pressure on a

retaining wall is
assumed to adopt a
triangular load
distribution, but due
to surcharge which is
usually assumed to act
on the ground surface,
the top of the wall
experiences some
degree of lateral
pressure.

Structural Design & Analysis using STAAD Geotechnical Design of Cantilever Retaining Walls to Eurocode 7 In this post, let us consider the retaining wall sized and loaded as shown in Figure 2. This structure has been modelled on Staad Pro in order to determine the action effects due to the applied load. [Analysis and Design of Cantilever Retaining Walls on Staad Pro](#)

Can I model, analyze and design retaining walls in STAAD.Pro ? One can model retaining walls in STAAD.Pro using solids elements or plate elements. If the objective of the analysis is to get the support reactions, joint displacements, concrete stress etc. then modeling with solid elements can be pursued.
