Core | Jernej Kavka (JK) at DDD Sydney 2018 There are reasons to start up a Spring application in a test, but for plain unit tests, it's not necessary. It's even harmful due to the longer turnaround times. Instead, we should build our Spring beans in a way that easily supports writing plain unit tests for. The Spring Boot Test Starter comes with Mockito and AssertJ as testing libraries.

Ideally, we should keep the integration tests separated from the unit tests and should not run along with the unit tests. We can do this by using a different profile to only run the integration tests. A couple of reasons for doing this could be that the integration tests are time-consuming and might need an actual database to execute.

When the tests pass, that code is considered complete. The same unit tests are run against that function frequently as the larger code base is developed either as the code is changed or via an automated process with the build. If the unit tests fail, it is considered to be a bug either in the changed code or the tests themselves.
