This book provides an overview of Chinese government auditing. It provides a summary of Chinese government auditing practice as well as a theoretical guide to the audit practice. In China, government auditing, internal auditing, and public auditing work together to constitute the audit supervision system. Government audit institutions provide professional guidance on the supervision of internal auditing and have the power to check the audit reports produced by public audit firms. Moreover, when a government audit institution renders audit recommendations based on its audit

finding, if the auditees refuse to adopt them, the government audit institution can order enforcement in accordance with the law. This book provides guidance not only to the government auditing in China, but also private auditing (including private accounting firms) and internal auditing (including internal auditors in companies). The book covers: Fundamental Nature of Auditing, Audit Functions, Audit Objectives, Basic Features of Audit Methodology of Auditing and Audit Management, Regulations on Auditing, IT Auditing, and Audit Culture.

Christiane Strohm investigates the effects of the Sarbanes-Oxley-Act and the revised 8th EU-Directive on auditing. She shows that there is a difference in the communication and safeguarding effects of a regulation, depending on the precision of its wording and that safeguarding effects also depend on auditors' monetary incentives and on perceived costs of litigation.

This study adds both knowledge and method in the writing of business history. The author proposes that a preliminary management audit can be devised and utilized to gather data, analyse and compare longitudinally the quality of management existing in organizations. This book modifies a methodological tool for measuring, analysing and comparing managements to aid in the writing of business history. It establishes criteria and examples of excellent management from a sample of the USA 's first large-scale organization – the railroads. Prior to the 1870s the railroads were the only big business in the USA and the early ones emerged as a managerial problem which made obsolescent traditional structures and

concepts and required effective management.

This book employs a narrative analytical approach to explore all aspects of the debate surrounding auditor reporting on going concern uncertainty worldwide. In-depth analysis of significant academic studies and of regulatory perspectives is combined with an illuminating empirical study in the Italian context. The book opens by discussing the assessment of going concern for accounting and auditing purposes. It is examined how going concern is considered in the FASB and IASB accounting standards and how auditors in the PCAOB and IAASB environments should verify its presence in financial statements and report on it in the audit report.

Accounting and auditing in relation to going concern in other jurisdictions are also addressed. Research into the determinants, accuracy, and consequences of going concern opinions (GCO) is then thoroughly reviewed, with separate examination of studies and trends in the United States, Europe, and the rest of the world. In the third part of the book, interesting evidence from the Italian Stock Market, including investor reactions to GCOs during the period 2008 – 2014, is presented and evaluated. The book will be of interest to academics, regulators, and practitioners alike.

The biggest corporate failure ever in British history occurred in 2008 with very little forewarning. The management of HBOS, a major national bank with a long history of prudence prior to the merger in 2001, were allowed to act incompetently. Auditors and regulators failed to act, ignoring a key senior whistleblower, and the ‘ competitive ’ stock market failed to spot management failure in time. This book is the first academic study of this collapse, uncovering some surprising evidence on the power and politics of large financial institutions. It details the processes and degrees to which financial challenge and regulation are undermined by this power. The research exposes a pro-active process of regulatory risk management by these institutions; the ease with which auditors and regulators can be captured; and how politicians and investors can be all too happy to hop on the stock market and management spin ride — with other people ' s money. The study questions the ideology and politics which supported and encouraged the management hubris, raising profound questions about the ‘ politics ’ of the academic disciplines of banking, finance and accounting today, and the theories they underpin. This account of management gone wrong is essential reading for students, researchers and professionals involved in banking, finance, credit infrastructure, economics and management studies.

The Politics of Financial Risk, Audit and Regulation

Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic,

legal, political, and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. Accounting and Financial System Reform in a Transition Economy: A Case Study of Russia was written to help fill that gap.
