Surgical Palliative Care Elsevier Health Sciences

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- *Patient Safety and Quality: An Evidence-Based Handbook for Nurses*. (AHRQ Publication No. 08-0043)." -- Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

Hospice Administration Manual American Dental Association

Gerontological Nursing: Competencies for Care, Second Edition is a comprehensive and student-accessible text that offers a holistic and inter-disciplinary approach to caring for the elderly. The framework for the text is built around the Core Competencies set forth by the American Association of Colleges of Nursing (AACN) and the John A. Hartford Foundation Institute for Geriatric Nursing. Building upon their knowledge in prior medical surgical courses, this text gives students the skills and theory needed to provide outstanding care for the growing elderly population. It is the first of its kind to have more than 40 contributing authors from many different disciplines. Some of the key features include chapter outlines, learning objectives, discussion questions, personal reflection boxes, and case studies.

Care of the Imminently Dying Marrelli and Associates, Inc

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Handbook of Home Health Standards E-Book Mosby Incorporated

Pedretti's Occupational Therapy: Practice Skills for Physical Dysfunction, 8th Edition prepares you for occupational therapy practice with adults who have physical disabilities. This cornerstone text provides a foundation for the development of clinical reasoning skills in a comprehensive, case-based learning approach to physical dysfunction. New full color photos and helpful pedagogy, including threaded case studies, OT Practice Notes, ethical considerations, and end-of-chapter review questions, reinforce learning, enhance retention, and prompt you to apply principles in a clinical setting. UNIQUE! Threaded case studies, woven throughout each chapter, help you apply concepts to real-life clinical practice. UNIQUE! Ethical Considerations boxes highlight the key ethical concerns of treatment options so you can practice ethically. UNIQUE! OT Practice Notes convey important considerations for professional practice. Focuses on the occupational therapist's role in health and wellness, which the OTA has identified as a key practice area in the 21st century. Information on prevention, rather than simply intervention or treatment, shows how OTs can take a proactive role in patient care. Evidence-based content included throughout, especially in regards to evaluation and intervention. Content on occupational therapy's commitment to considering cultural and ethnic diversity in every chapter. Key terms, chapter outlines, chapter objectives lay out the information you can expect to learn from each chapter.

Conditions of Participation for Home Health Agencies Humana Press Emphasizing the multi-disciplinary nature of palliative care the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

Hospice Social Work National Academies Press

All hospices must have a current manual of policies and procedures, not only essential to the management and administration of a hospice organization, but to enable organizations to comply with regulatory and/or accreditation standards. As hospice organizations emerge and grow in this decade, they will need a current, comprehensive, and customizable hospice administration manual. *Hospice Administration Manual* is

written in a policy format commonly used in health care organizations and includes 135 policies and procedures. In addition, it includes a CD-ROM that includes all policies and procedures in the Manual and a policy "constructor" to assist agencies in preparing new policies and procedures in the correct format. Includes 135 policies and procedures divided into two sections: Organizational Policies and Patient Service Policies. Written in a policy format commonly used in health care organizations. Addresses and cross references all regulatory and accreditation standards for major governing organizations: Joint Commission on Accreditation of Health Care Organizations (JCAHO), Community Health Accreditation Program (CHAP), National Hospice and Palliative Care Organization (NHPCO), and Medicare Conditions of Participation. Includes a CD-ROM containing all policies and procedures from the Manual, plus a policy "constructor" to assist agencies in preparing new policies and procedures in the correct format.

Palliative care is an essential element of our health care system and is becoming increasingly significant amidst an aging society and organizations struggling to provide both compassionate and cost-effective care. Palliative care is also characterized by a strong interdisciplinary approach. Nurses are at the center of the palliative care team across settings and populations. The seventh volume in the HPNA Palliative Nursing Manuals series, *Care of the Imminently Dying* provides an overview of symptom management when a patient is reaching the end of their life. This volume covers delirium and the advantages of early diagnosis, determining the presence of dyspnea, death rattle, or cough, urgent syndromes that may appear at the end of life, palliative sedation, and the withdrawal of life-sustaining therapies. The content of the concise, clinically focused volumes in the HPNA Palliative Nursing Manuals series is one resource for nurses preparing for specialty certification exams and provides a quick-reference in daily practice.

The Long-term Care Mock Survey Toolkit National Academies Press

'*Pediatric Palliative Care*', the fourth volume in the 'HPNA Palliative Nursing Manuals' series, addresses paediatric hospice, symptom management, paediatric pain, the neonatal intensive care unit, transitioning goals of care between the emergency department and intensive care unit, and grief and bereavement in paediatric palliative care.

HCPCS 2008 Level II Expert Jones & Bartlett Publishers

This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of residents in post-acute and long-term care settings.

Patient Safety and Quality Hpna Palliative Nursing Manual

The United States faces a significantly aging population as well as a growing share of the population that is living longer with multiple chronic conditions. To provide high-quality care to people of all ages living with serious illness, it is critical that the nation develop an adequately trained and prepared workforce consisting of a range of professionals, including physicians, nurses, social workers, direct care workers, and chaplains. To explore some of the key workforce-related challenges to meeting the needs of people with serious illness, the National Academies of Sciences, Engineering, and Medicine hosted a workshop on November 7, 2019. This publication summarizes the presentations and discussions from the workshop.

Instructions to Surveyors Jones & Bartlett Learning

Pamphlet is a succinct statement of the ethical obligations and duties of individuals who enter the nursing profession, the profession's nonnegotiable ethical standard, and an expression of nursing's own understanding of its commitment to society. Provides a framework for nurses to use in ethical analysis and decision-making.

Oxford Textbook of Palliative Medicine Columbia University Press

Effective Management of Long-Term Care Facilities explores the complex operations of the long-term care facility and offers critical skills to current and future nursing home administrators for delivering quality, cost-effective services. The Second Edition has been thoroughly revised and reorganized to offer a more cohesive presentation of the material, as well as new, in-depth information on licensing and important skills for becoming a nursing home administrator. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

Building the Workforce We Need to Care for People with Serious Illness Columbia University Press

In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. *Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis* presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. *Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis* provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

Medicare, Medicaid, State Operations Manual Nursesbooks.org

In addition to reprinting the PDF of the CMS CoPs and Interpretive Guidelines, we include key Survey and Certification memos that CMS has issued to announced changes to the emergency preparedness final rule, fire and smoke door annual testing requirements, survey team composition and investigation of complaints, infection control screenings, and legionella risk reduction.

Home Health Aide: Guidelines for Care Instructor Manual Oxford University Press

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care workforce. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Health Care Facilities Code Handbook Oxford University Press, USA

Volunteers have a long been involved in supporting the delivery of palliative care. Indeed in some countries, the range and quality of hospice and palliative care services depends on the involvement of volunteers. Hospice and palliative care services and volunteering are changing. As society develops, so too does volunteering. Volunteers have growing expectations of organizations, and increasingly seek roles that meet their needs and aspirations, rather than fitting in with organizational approaches. As hospice and palliative care services experience

increasing and changing demands for their services due to aging populations with complex healthcare needs, we need to recognize that volunteers have a vital role to play in supporting the delivery of services of the future. *The Changing Face of Volunteering in Hospice and Palliative Care* explores the complex phenomenon that is volunteering in hospice and palliative care in different countries. It considers how and why volunteering is changing, through the contributions of authors from Western and Eastern Europe, North America, Australia, Africa, and India. It reflects on the influence of culture and organisational contexts, in addition to management approaches, legislative, and political influences, highlighting factors that contribute to the success of volunteering. Contributing to knowledge and understanding in the field of volunteering in hospice and palliative care internationally, this book highlights the factors that contribute to the success of volunteering models, allowing readers to see possibilities for change and find new ideas for innovative practice in their own setting.
