Senior Stationary Engineer (Electric)

James Russell Publishing Excerpt from The Heath Book for Threshermen: A Book of Instructions for Traction and Stationary Engineers, With Questions and Answers, Useful Tables and Rules A few definitions are given in order that the engineer may understand some of the common terms used in explaining the work of steam engines and boilers. Area. Area is the

---

extent of any open surface. And is found by multiplying its length by its breadth, if square or rectangular. If the surface is circular, the area may be found by squaring the diameter, which is multiplying the diameter by itself, and multiplying this number by 7854. This rule will apply to any circular surface, no matter what the diameter is.

around a circle. The circumference is found by multiplying the diameter by 3.1416. Diameter. The diameter is the distance across a circle or through a sphere, passing through its center. Doubling the diameter of a circle will double its circumference, and will increase its area four times. About the Publisher Forgotten Books publishes

hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work.
