The story of how I freed myself... from myself. I found myself at the dawn of an adventure that superseded geographical miles. From the base of a mountain of truth there was no turning back. The story began as a desire to liberate myself from the bounds of society, but at every turn there seemed to be a mirror. The story, and the meta-story of its telling, evolved into a Transformative peace of non-fiction. I would never return the same. My journey through history and culture, my passage through nexuses of spirituality and science, my battle with apathy and aggression, brought me to the rocky and elusive middle path; and it all began with my first bicycle tour and the retelling of it. There is a toxic landfill in every person's mind where the unpleasant seeds of life are

dumped...relentless weeds that mix with the flowers. Caddy McCoy's garden of life has become quite overgrown. Terrified of facing her demons, she finds herself awakening to the sound of Bay water lapping up against the pier outside her cottage, hung over and once again confronted with poignant memories. With her life-long companion at her side she rehashes the story of her life, blazing a path as jubilant as it is devastating: from a vivacious girl of five, trying to make sense of her father and brother's sudden disappearance; to growing up in an adoptive family alongside a mother who seems to have permanently checked out; through college life, racial integration, loves lost, accidents and deaths, charming husbands of shadowy backgrounds, but also children who still give her reason to hope. Finally back at her Bay home, the question remains: who exactly is Caddy's bedroom companion?

Fuel-breaks are being built in central California as part of a program aimed at preventing or controlling disaster fires. If fuel-breaks are to serve their purpose, accumulated dead and live fuels must be removed periodically. Prescribed burning may be the answer to the problem of maintenance. This report considers and answers such questions as: When should burning be done? What factors must be considered? How should burning be done? and what are the costs?

About the Authors Chinchilla Facts Many animal babies are born with all their fur, or complete with feathers, but the chinchilla kit is one of the few animals that is born with its eyes wide open. Even puppies are born with their eyes closed! Chinchillas cannot get their fur wet, so instead of bathing in water, chinchillas use volcanic ash to clean their fur. This ash is found in the mountains where chinchillas live in the wild. When chinchillas are kept as pets, the chinchilla owner must purchase ash for the chinchilla to bathe in several times a week. Chinchillas have very special little hands that can grab and hold items in much the same way that a human grabs and holds items. Chinchillas are highly unique because they are one of the few species in the wild that are monogamous. This means that they choose a partner, and keep that same partner for life. While all chinchillas are small in size, especially compared to more common mammals like dogs and cats, the chinchilla's body size is interesting because unlike most other mammal groups, the chinchilla females are usually a bit larger than the males. This is seen more often in spiders, and even birds, but very rarely in mammals. Most wild chinchillas are grey or brown in color, while domestic (pet) chinchillas are the more colorful, with white, beige, and violet being common. Wild chinchillas in the Andes mountains rarely actually drink water because they eat a lot of fruits and succulent plants.

Succulent plants are plants in the cactus family that hold a lot of water in them. The water inside the fruits and plants that the chinchilla eats gives them most of the water they need to live.

The first in a series of highly practical, hands on, step-by-step photographic manuals, *Replacing Your Boat's Engine* fills a gap in the market for the DIY boat builder and repairer. It is a subject covered only in piecemeal fashion by the yachting press, which, like general boat repair manuals, can't go into the level of detail Mike Westin does. This is a visual, hand-holding guide, dwelling on the practical details of replacing a boat's engine and related systems as it explains each procedure rather than focussing on the theory (which is relegated to an appendix, for those who wish to go further). Anyone who wishes to upgrade their boat's engine or replace an ailing or broken engine will find this step-by-step illustrated book a hand-holding godsend. *Spacetime Bicycle: the Grade*
