This comprehensive book serves as a review for the Fellow of Interventional Pain Practice (FIPP) exam and functions as a concise guide for all interventional pain doctors. Through educational initiatives, it helps to promote consensus-building among experts on the effectiveness of existing techniques and avenues for advancement of therapeutic performances. The book is divided into four sections (head and neck, thoracic, lumbar and sacral/pelvic), and each chapter is devoted to the safe, standardized approach to interventional procedures. To prepare both the examiner and the examinee for the FIPP examination, each chapter contains the relevant C-arm images and outlines the most common reasons for “unacceptable procedures performance” and “potentially unsafe procedures performance.” Distinguishing it from many of the previous guides, it also includes labeled fluoroscopic high quality images and focuses on the

current FIPP-examined procedures with all accepted approaches. Written and edited by world leaders in pain, Interventional Pain guides the reader in study for FIPP Exam and offers a consensus on how interventional procedures should be performed and examined.

The Path of Most Resistance: A Step-by-Step Guide to Planning Nonviolent Campaigns is a practical guide for activists and organizers of all levels, who wish to grow their resistance activities into a more strategic, fixed-term campaign. It guides readers through the campaign planning process, breaking it down into several steps and providing tools and exercises for each step. Upon finishing the book, readers will have what they need to guide their peers through

the process of planning a campaign. This process, as laid out in the guide, is estimated to take about 12 hours from start to finish. The guide is divided into two parts. The first lays out and contextualizes campaign planning tools and their objectives. It also explains the logic behind these tools, and how they can be modified to better suit a particular group's context. The second part provides easily reproducible and shareable lesson plans for using each of those tools, as well as explores how to embed the tools in the wider planning process.

Based on a structured and process-driven approach this book demonstrates how to systematically identify exceptional opportunities for innovation. An innovation tournament, just like its counterpart in sports, starts with a large number of candidates, with opportunities as the players. These opportunities are pitted against each other until only the exceptional survive. This book provides a principled approach for the effective management of innovation tournaments - identifying a wealth of promising opportunities and then evaluating and filtering them intelligently for greatest profitability. With a set of practical tools for creating and identifying new opportunities, it guides the reader in

evaluating and screening opportunities. The book demonstrates how to construct an innovation portfolio and how to align the innovation process with an organization's competitive strategy. Innovation Tournaments employs quirky, fresh examples ranging from movies to medical devices. The authors' tool kit is built on their extensive research, their entrepreneurial backgrounds, and their teaching and consulting work with many highly innovative organizations.

Energy Landscapes of Nanoscale Systems provides a snapshot of the state-of-the-art in energy landscapes theory and applications. The book's chapters reflect diversity and knowledge transfer that is a key strength of the energy landscape approach. To reflect the breadth of this field, contributions include applications for clusters, biomolecules, crystal structure prediction and glassy materials. Chapters highlighting new methodologies, especially enhanced sampling techniques are included. In particular, the development and application of global optimization for structure prediction, methods for treating broken ergodicity on multifunnel landscapes, and treatment of rare event dynamics that reflect the state-of-the-art are featured. This book is an important reference source for materials scientists and energy engineers who want to understand more about how nanotechnology applies to the energy landscape approach. This volume is dedicated to Prof. Roy L. Johnston, who was formerly Co-

Editor of the Frontiers of Nanoscience series, and who passed away in 2019. Outlines applications and advances in theory and simulation of energy systems at the nanoscale Explores how the energy landscapes approach is being applied to nanoscale materials Assesses major challenges in applying nanomaterials for energy applications on an industrial scale
