Qualitative Research in Nursing and Healthcare is an invaluable resource for those who carry out qualitative research in the healthcare arena. It is intended to assist:

Professionals and academics in the healthcare field who undertake or teach research in clinical or educational settings; Postgraduates who are undertaking qualitative research and want to revise qualitative research approaches and procedures before going on to more specialist texts; and

Undergraduates in their last year who wish to learn about qualitative perspectives or carry out a project using these approaches. Fully updated from the earlier editions by Holloway and Wheeler, it reflects recent developments in nursing research. This new edition provides clear explanations of abstract ideas in qualitative research as well as practical procedures. Structured into four sections, the book looks at the initial stages, methods of data collection, qualitative approaches and analysis of collected data. It also contains a chapter on writing up and

publishing qualitative research. With applied and practical examples throughout, *Qualitative Research in Nursing and Healthcare* is essential reading for those who are looking for a comprehensive introduction to qualitative research.

Qualitative Research in Nursing and Healthcare
Emerald Group Publishing

In this book you will read stories told by faculty who have redesigned their university courses using the Decision-Based Learning pedagogy and the impact this powerful strategy can have on student learning. It should be of use to anyone teaching and designing curricula in higher education settings.

Introducing Research and Evidence-Based Practice for Nursing and Healthcare

Professionals Oxford University Press

This step-by-step guide takes the reader logically through the process of undertaking a literature review, from determining when this methodology might be useful, through to publishing the findings. It is designed particularly for students undertaking a dissertation using literature review methodology. However, it also caters to practitioners who wish to review the existing evidence in order to develop practice. Key features of the text include: a chapter on what makes a good literature review, so that readers are clear and confident about what they're aiming for; discussion of the value of literature reviews, whether for fulfilling the requirements of a course or for developing practice; a chapter structure that reflects the structure of a typical dissertation by literature review, making the

material intuitive and easy to navigate; case examples throughout to illustrate how methodological principles work in practice; a troubleshooting guide to provide support and advice on common problems when carrying out a literature review; advice on the dissemination of findings. Written by an established author with significant experience teaching and supervising students doing literature reviews, this invaluable text offers systematic and insightful advice on all aspects of literature review methodology, from problem identification to synthesizing information to forming conclusions. It is ideal for any student or practitioner in health and social care looking to undertake a literature review for study or practice purposes.

Theory and Practice World Scientific

This book provides an overview of the emergence of geography as a discipline in Bangladesh and the contributions made by local geographers towards the development of the country. It explores problems associated with population growth and poverty, landlessness and food security, land use and natural resource management, urbanism, climate change, disaster management and human health. The volume shows how research and the study of geography in the ' periphery ' can contribute in achieving progress in countries like Bangladesh and help them prepare against imminent disasters, ecological, social, economic shocks and uncertainties. This book will be useful to students and

researchers of geography, environment studies, disaster management, development studies, geoinformatics, geology, demography, sociology and South Asian studies with a particular focus on Bangladesh. It will also interest various policy makers and NGO professionals working in these and related fields.

Clinical Research for the Doctor of Nursing Practice John Wiley & Sons

Evidence-Based Sexual and Reproductive Health Care: Policies, Clinical Procedures, and Related Research embraces the concept of a multi-professional approach to clinical care excellence in sexual and reproductive health care. A comprehensive resource, it explores the complex nature of sexual health related issues, contemporary management interventions, and the underpinning theories and concepts. With contributions from

leading experts from around the globe, the text features perspectives from a wide variety of fields, such as education, medicine, nursing, and the health professions. User-friendly and practical in approach, it explores current and future developments, ongoing research, new treatment procedures, and emerging technological advancements. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

Policies, Clinical Procedures, and Related Research
Routledge

This study involved an exploration of the impact of organizational capital investment on employee innovation in the manufacturing industry. The overarching question was: Does organizational capital investment impact employee innovation in the manufacturing industry? Organizations tend to place much emphasis on how skill drives innovation, but not on how capital investment impact employee innovation. The research was

guided using a qualitative phenomenological case study design to probe the impact of capital investment on employee innovation. Participants were selected through a convenience and purposive sampling method using the researchers personal professional network as well as the snowball method to seek participants from individuals referrals. Data collection involved personal interviews, audio recording, and note taking. The assumption was that employee innovation is not an option but a necessity, because organizations compete on global fronts for resources and market share. Consequently, capital investment in machinery and employee innovation becomes symbiotic in nature, not mutually exclusive. Results showed employee innovation can be impacted and enhanced through the acquisition and application of appropriate technological capital investment. The researcher recommends further research to ascertain whether the amount of organizational capital investment is proportional to the development of employee

innovativeness.

A Postgraduate's Guide to Doing a Literature Review in Health and Social Care, 2e Jaypee Brothers Medical Publishers

Research can seem difficult to get to grips with. However, at the heart of this book is the view that research is essentially a simple activity, the principles of which can be readily understood by students new to the subject. Each chapter guides the reader to uncover the 'mysteries' of research, exposing each aspect in turn, while demonstrating how research in healthcare is a practical activity, orientated directly to patient care. Fully updated to refer to the latest sources and studies, this book now includes: Two new chapters on qualitative

research, clearly explaining what it is and how to do it A comprehensive glossary of qualitative and quantitative terms to demystify tricky terminology An appendix of statistical tests, explaining the procedures for each Many new examples from practice, applying the theory to a wide range of scenarios from across the healthcare professions This book is designed for all students of nursing and allied health professions studying research for the first time. Research is illustrated through examples of activities familiar to students from their daily lives, helping to build confidence in undertaking research and evidence-based practice.
Evidence-Based Sexual and Reproductive Health Care SAGE

The United States government spends billions of dollars on home ownership programs in low and moderate income communities. However, there is paucity of academic research to assess the socioeconomic impacts of these programs. The purpose of this empirical research was to assess their possible impacts. The key research question explored the relationship between low and moderate income home ownership, the independent variable, and the dependent variables of the rates of crime, unemployment, high school graduation, and standardized test scores in the communities concerned. The research design was quantitative-causal. Welfare economic theory formed the theoretical foundation for the study. Using public records, data were collected from four low and moderate income communities in major Midwestern metropolitan areas. The proposed relationships

were tested through independent sample t-tests and regression analyses. Results indicated no significant relationship between low and moderate home ownership rate and the rates of the studied socioeconomic indicators. A significant social change implication of this finding would be to relocate federal dollars from housing schemes to more socially and economically relevant programs, such as those geared toward improving educational opportunities in low and moderate income communities.

The Writing & Critique Group Survival Guide Learning Matters Essentials of Research Methodology and Biostatistics—A Comprehensive Guide for Health Care Professionals is a precisely written textbook for undergraduate and postgraduate medical, dental, nursing, physiotherapy, clinical psychology and other allied health care profession students.

The book is an excellent attempt towards introducing the students and faculty members to the various research methodologies adopted in the field of health sciences to record health-related data. Easy to follow: An applied, user-friendly textbook with self-explanatory simple language and presentation for the students. An example-oriented book: Plenty of examples to equip the students to prepare for exams as well as independently conduct their research activities. Illustrative presentation: Diagrammatic and tabular presentation of content to facilitate quick review and recall of important concepts. Systematic and logical organization: Content organized in systematic and logical manner to facilitate better understanding. Qualitative and quantitative research methods, analysis: Adequate coverage of quantitative as well as qualitative research process, methodology and analysis. Authentic content: Content reviewed, authenticated by a panel of renowned faculty members/experts. Unique content: Several unique topics such as

sample size calculation, uses of different parametric and nonparametric statistical tests, methods, qualitative research process, and analysis included, with practical examples from Indian scenario, which are rarely found in other research methodology books. Enormous knowledge in a nutshell: In-depth coverage of all aspects of research methodology and biostatistics in a concise manner. Review questions: About 150 end-of-chapter MCQs, a useful resource for the readers to review their preparation for the university exams and also to prepare for qualifying entrance exams for postgraduate and doctoral courses.

Understanding Nursing and Healthcare Research

Core Curriculum for Interdisciplinary Lactation Care provides a trustworthy source for lactation-specific information and education for students, interns, certification candidates, instructors, and clinicians—in any discipline or specialty—who provide care to breastfeeding families. Published in

association with the Lactation Education Accreditation and Approval Review Committee (LEARC), it reflects the current state of practice and serves as a fundamental resource for beginning clinicians, orienting staff, and planning continuing education programs. Organized in three sections, Core Curriculum for Interdisciplinary Lactation Care focuses on the science, management, and professional aspects of lactation care. With contributions from a team of clinical lactation experts from several countries around the world, it emphasizes an interdisciplinary approach to provide comprehensive care for breastfeeding families. Research Methodology Jones & Bartlett Learning

Increasingly, albeit in small numbers, women are overcoming the forces that have prevented qualified women from entering the executive suites of organizations. However, very little is known about the

strategies for overcoming gendered obstacles and reaching senior executive roles, particularly in male-dominated fields. In *Solving for X in the Y Domain*, sixteen women who are leaders in the fields of science, technology, engineering, and mathematics (STEM) describe their experiences with overcoming gender-based barriers to reaching senior-level leadership positions, and they share these strategies and skills with other aspiring women. This study adds a new dimension to the body of knowledge by describing women's strategies, behaviors, and skills for overcoming gender bias and backlash, with the differentiating aspect of this study being a focus on women who have empowered themselves to seek and to find strategies and behaviors that enabled them to surmount the specific obstacles they encountered. Their detailed accounts incorporate extensive layers of situational facts as well as their feelings, impressions, perceptions, thoughts, and reactions. Women leaders' experiences in the use of buffering behaviors—self-management, impression management, political skill, and performance—provide a template of behaviors to successfully mitigate the effects of gender-based barriers. These inspiring professional women did not give up, they did not quit, and they were tenacious in the face of disheartening and demoralizing situations. On occasion they become discouraged, angry, incensed, and frustrated. However, they continued to direct their energies and their intellects toward solving for X in the Y

domain.

The Impact of Organizational Capital Investment on Employee Innovation in the Manufacturing Industry McGraw-Hill Education (UK)

This book provides students with accessible and authoritative knowledge of the essential topics of nursing and healthcare research.

Promoting Health: A Practical Guide - E-Book
Jones & Bartlett Learning

This text is a comprehensive, highly readable guide to how to undertake a literature review in health and social care, tailored specifically for postgraduate study. Essential reading for all those undertaking any study at post-graduate level, the book provides clarity and a step by step approach to doing a literature review from start to finish which will enable you to:

- Identify which type of review is appropriate for your study
- Select the literature that you need to include in your review
- Search for, appraise and analyse relevant literature
- Write up your review

Crucially the

book explores the common features of a broad range of types of literature review, which serve different functions – including the literature review that is a pre-requisite prior to a larger empirical study, and the literature review that is a study in its own right. With real-life examples of written research and succinct summaries at the end of each chapter, A Post-Graduate 's Guide to Doing a Literature Review in Health and Social Care is the ideal text for students wanting to get the very most from their study.

SAGE

Nursing and Healthcare Research at a Glance is perfect for nursing and healthcare students, as well as newly qualified practitioners and anyone looking for a refresher or introduction to research. Covering a broad range of topics gathered under key sections, this essential book combines informative diagrams and images to provide memorable information for students on one page,

and accessible, clearly written text on the facing page. It includes information on a range of quantitative and qualitative research methods, the process of gaining ethical permission, conducting research with special groups including children, and successfully conducting reviews of the literature. Key features include: Clear and informative full colour illustrations throughout An emphasis on need-to-know research information for busy students and healthcare staff A wide range of research methods, currently used in modern healthcare research An impressive line-up of specialist and well-known experts in the field of health and nursing research This book provides quick access to the principles and reality of research and its implementation within the education and practice environment. It is essential reading for anyone in health service education and service settings with limited time who need to draw on research evidence.

Ebook: Clinical Governance: Improving the quality

of healthcare for patients and service users SAGE Publications

Thinking critically is an essential skill, both for students and for the modern, evidence-based, healthcare practitioner. You need to be able to find, understand and evaluate the evidence that underpins your assignments, clinical decision making and practice. The good news is that you use all of these skills in everyday life. You don't believe every advert you see or respond to every spam email. It's just a question of taking these critical skills and having the confidence to apply them to your academic work. This book will help you do just that. It will enable you to:

- recognise your existing ability to be a critical thinker
- spot logical flaws and inconsistencies in arguments
- consider health issues from multiple perspectives, weighing up the strengths and weaknesses of a case
- build a convincing argument in assessments
- develop a range of critical skills for successful study and healthcare practice.

Critical Thinking Skills for

Healthcare is an essential resource for all health professionals in training.

Doing a Literature Review in Nursing, Health and Social Care Elsevier Health Sciences

Critiquing Nursing Research 2nd

Edition Andrews UK Limited

From Question to Proposal Routledge

How do I start my literature review? What sources can I go to for information? How do I analyse the work of others? This clear, practical book guides readers undertaking their own literature review through the process, giving them the skills and knowledge they need for success. The chapters address: - Different types of literature reviews - Critically analysing material - Presenting the final piece of work - Best practice in referencing and plagiarism - Systematic approaches to literature reviews It will be an essential guide for all nursing and all

allied healthcare students, as well as professionals working in practice.

How to Make Revisions, Self-Edit, and Give and Receive Feedback Goodfellow Publishers Ltd

How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “ The Truth ” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

How to Critique Journal Articles in the Social Sciences Pearson UK

Basic Steps in Planning Nursing Research: From Question to Proposal is the perfect introduction to the research process. It details the development of an effective research plan, and guides readers through all stages of the process from finding a research topic, to the final written proposal. It takes an in-depth focus on the planning process which makes it an excellent tool for beginners while still being relevant to people at all levels of study who need to develop a research plan. The Seventh Edition continues to teach readers how to prepare an appropriate question and topic and the steps it takes formulate a conclusion. All of the chapters have been updated with new references and current information including a renewed focus on evidence-based practice

and an expansion of research ethics. Proposals are included at the end of the text to help students learn. Geography in Bangladesh McGraw-Hill Education (UK) This second edition of Quay Books' bestselling title retains all of the successful features of the first, plus additional material including a chapter on European psychiatric research. Foreword by Kevin Gournay.
