“ The station where you begin your life, does not need to be your station at the end of your life. The choice is yours. ” Growing up poor in wartime England, Frank Farr is an indifferent student, and once he gets into his rebellious teen years, struggles with juvenile delinquency and seems headed for trouble. The harrowing story of the most destructive American wildfire in a century. There is no precedent in postwar American history for the destruction of the town of Paradise, California. On November 8, 2018, the community of 27,000 people was swallowed by the ferocious Camp Fire, which razed virtually every home and killed at least 85 people. The catastrophe seared the American imagination, taking the front page of every major national newspaper and top billing on the news networks. It displaced tens of thousands of people, yielding a refugee crisis that continues to unfold. Fire in Paradise is a dramatic and moving narrative of the disaster based on hundreds of in-depth interviews with residents, firefighters and police, and scientific experts. Alastair Gee and Dani Anguiano are California-based journalists who have reported on Paradise since the day the fire began. Together they reveal the heroics of the first responders, the miraculous escapes of those who got out of Paradise, and the horrors experienced by those who were trapped.

Their accounts are intimate and unforgettable, including the local who left her home on foot as fire approached while her 82-year-old father stayed to battle it; the firefighter who drove into the heart of the inferno in his bulldozer; the police officer who switched on his body camera to record what he thought would be his final moments as the flames closed in; and the mother who, less than 12 hours after giving birth in the local hospital, thought she would die in the chaotic evacuation with her baby in her lap. Gee and Anguiano also explain the science of wildfires, write powerfully about the role of the power company PG&E in the blaze, and describe the poignant efforts to raise Paradise from the ruins. This is the story of a town at the forefront of a devastating global shift—of a remarkable landscape sucked ever drier of moisture and becoming inhospitable even to trees, now dying in their tens of millions and turning to kindling. It is also the story of a lost community, one that epitomized a

provincial, affordable kind of Californian existence that is increasingly unattainable. It is, finally, a story of a new kind of fire behavior that firefighters have never witnessed before and barely know how to handle. What happened in Paradise was unprecedented in America. Yet according to climate scientists and fire experts, it will surely happen again.

From the #1 international bestselling master of Scandinavian noir: a “marvelously told mystery” of murder in Sweden and corruption in Africa (Austin American-Statesman). In an African convent, four nuns and an unidentified fifth woman are found with their throats slit. The local police do little to investigate . . . and cover up the unknown woman’s death. A year later in Sweden, Holger Eriksson, a retired car dealer and birdwatcher, is skewered to death after falling into a pit of carefully sharpened bamboo poles. Soon after, the body of a missing florist is discovered strangled and tied to a tree. Baffled and appalled by the crimes, the only clues Inspector Kurt Wallander has to go on are a skull, a diary, and a photo of three men. What ensues is a complex, meticulously plotted investigation that will push the detective to his limits. The key is the unsolved killing of the fifth woman in Africa—who was she, and what did she have to do with the brutal deaths of two seemingly innocent men? Are more victims in danger? The answers will lead Wallander to question everything he thought he knew about the psychology of murder. An international bestseller, this “scary and cunning tale” (Rocky Mountain News) “achieves the satisfying density of plot and characterization” that established Henning Mankell as one of the twentieth-century’s finest crime writers. His Kurt Wallander mysteries are now the basis for the hit TV show Wallander starring Kenneth Branagh (The Baltimore Sun).

For the first time, Stephen Grey tells the inside story of international prisons sanctioned by the U.S. Government and used by the CIA to hold and torture people suspected of terrorism.

Using contacts deep inside the U.S.

Government, Grey reveals how deeply the Bush administration is involved in the program and questions the truth of statements made by Secretary of State Condoleezza Rice. He also shines a spotlight on the heads of European nations who turned a blind eye to the program when it showed up in their back yards. Grey takes an unflinching look at a horrendous practice that scorns Geneva Convention rules and is powered by corruption at the highest levels of governments worldwide. Through his unprecedented access to CIA flight records and dozens of sources at the senior levels of the current administration, Grey has produced a story of flight plans, extreme torture, and the clash of religions and governmental posturing that goes on today. *Ghost Plane* tells the stories of individuals abducted at airports around the world and transported for interrogation and torture on a fleet of leased planes manned by CIA operatives. Grey paints a disturbing ethical picture of the war on terror and lays the responsibility for abduction and torture at the doorstep of Washington, D.C.

The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of *Feedback Systems* is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

Room for Manoeuvre John Wiley & Sons
The definitive refutation to the argument of *The Bell Curve*. When published in 1981, *The Mismeasure of Man* was immediately hailed as a masterwork, the ringing answer to those who would classify people, rank them according to their supposed genetic gifts and limits. And yet the idea of innate limits—of biology as destiny—dies hard, as witness the attention devoted to *The Bell Curve*, whose arguments are here so effectively anticipated and thoroughly undermined by Stephen Jay Gould. In this edition Dr. Gould has written a substantial new introduction telling how and why he wrote the book and tracing the subsequent history of the controversy on innateness right through *The Bell Curve*. Further, he has added five essays on questions of *The Bell Curve* in particular and on race, racism, and biological determinism in general. These additions strengthen the book's claim to be, as Leo J. Kamin of Princeton University has said, "a major contribution toward deflating pseudo-biological 'explanations' of our present social woes."
