Stereo receivers usually have only two channels (left and right) and are used mainly for audio*

devices, whereas surround receivers (also called AV receivers) can be connected to more speakers and can handle video as well. As the name suggests, surround systems let you hear sounds coming from all around you - from left, right, front and back.

6.1 surround sound: 6.1 surround sound provides audio for a center-channel speaker, two front speakers, two

surround speakers, a rear-channel speaker, and a subwoofer. 6.1-channel surround sound receivers can amplify six or seven channels of audio and support Dolby Digital EX and DTS-ES formats.

Stereo Receiver Buying Guide

An AV receiver (also known as a home theater receiver) processes both audio and video signals, sending the audio to your speakers and video to the TV. Stereo receivers, also known as audio receivers, can only handle audio

signals.

Stereo receivers are generally more affordable than surround sound receivers. Home

theater receivers, or surround sound receivers, are designed to "surround" the viewer with the audio from a TV show or movie. Surround sound receivers are generally more expensive than stereo receivers because they have to power more speakers, in some cases up to 11, and two subwoofers.
