This is a romantic look back at southern foods and foodways. Typical of many other such books following the Civil War, there is a touching, nostalgic (condescending) evocation of the author's Mammy and her cooking. Painful as some of this is to read today, we find an underlying love and admiration for the Mammy and a feeling of loss for the "good old days." If one can pass by this aspect of the book, one can learn a great deal about an antebellum Southern kitchen. Every chapter contains good, solid Southern recipes. Many pages are required to discuss all the variations on the theme of the pig and pork: how to select, cure, pickle, make hams, hang hams, smoke, Render Lard, Prepare Fried Hog's Feet, Souse and Hog's Foot Oil and Jelly. We also have Barbecued Rabbit, Squirrel Smothered, Possum Roasted, Fried Chicken, Fig Pudding, Fried Pies, Sweet Potato Custard, Molasses Pie, Blackberry Mush, and Baked Peaches. There are sections on Creole Cookery, and fascinating discussions on the foods and festivities associated with special occasions - Weddings, Christmas, Birthday Barbecues, and Political Barbecues, among others.

This guide gives authoritative advice on current tree climbing techniques which are both safe and effective. It has been updated to take into account advances in tree climbing equipment and techniques since 1999. Incorporating the Work at Height Regulations 2005, Health and Safety Executive research and the latest techniques and equipment the all-new AA A Guide to Good Climbing Practice replaces the AA/FASTCo Guide to Good Climbing Practice (1999) and the AA/FASTCo Aerial Rescue Guidance Notes (1997). "The Guide sets out techniques and systems of work that can be considered as best practice guidance in arboriculture and helps anyone in the business meet their legal obligations." Dr Richard Nourish, Head of the Agriculture and Food Section, Health and Safety Executive.

Grid-Scale Energy Storage Systems and Applications provides a timely introduction to state-of-the-art technologies and important demonstration projects in this rapidly developing field. Written with a view to real-world applications, the authors describe storage technologies and then cover operation and control, system integration and battery management, and other topics important in the design of these storage systems. The rapidly-developing area of electrochemical energy storage technology and its implementation in the power grid is covered in particular detail. Examples of Chinese pilot projects in new energy grids and micro grids are also included. Drawing on significant Chinese results in this area, but also including data from abroad, this will be a valuable reference on the development of grid-scale energy storage for engineers and scientists in power and energy transmission and researchers in academia.

Addresses not only the available energy storage technologies, but also topics significant for storage system designers, such as technology management, operation and control, system integration and economic assessment Draws on the wealth of Chinese research into energy storage and describes important Chinese energy storage demonstration projects Provides practical examples of the application of energy storage technologies that can be used by engineers as references when designing new systems

The Intergovernmental Panel on Climate Change (IPCC) has recently summarized the state of the art in research on climate change (Climate Change 1995). The most up to date research findings have been divided into three volumes: • the Science of Climate Change (working group I), • the Impacts, Adaptation and Mitigation of Climate Change (working group II), and • the Economic and Social Dimensions of Climate Change (working group III) There is a general consensus that a serious change in climate can only be avoided if the future emissions of greenhouse gases are reduced considerably from the business as usual projection and if at the same time the natural sinks for greenhouse gases, in particular that of CO<sub>2</sub>, are maintained at the present level or preferably increased. Forests, forestry and forestry industry are important parts of the global carbon cycle and therefore they are also part of the mitigation potentials in at least a threefold way: 1. During the time period between 1980 and 1989 there was a net emission of CO from changes in tropical land use (mostly tropical deforestation) of 2 1. 6 +/- 1 GtC/a, but at the same time it was estimated that the forests in the northern hemisphere have taken up 0. 5 +/- 0. 5 GtC/a and additionally other terrestrial sinks (including tropical forests where no clearing took place) have been a carbon sink of the order of 1. 3 +/- 1.

David Vizard's How to Build Horsepower Echo Point Books & Media Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gasses leaving through the exhaust. Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.
