With starred reviews from Booklist ("Potently emotional, powerfully life-affirming") and Library Journal ("Another engrossing addition to Novak's addictive series"), this is a Whiskey Creek book you don't want to miss! As the daughter of a hoarder, Phoenix Fuller had a tough childhood. So when the handsome, popular Riley Stinson became her boyfriend in high school, she finally felt as though she had something to be proud of. Phoenix was desperate not to lose him—especially once she found out she was pregnant. Yes, she might have acted a bit obsessive when he broke up with her. But she did not run down the girl he started dating next. Unfortunately, there was no way to prove her innocence. Now, after serving her time in prison, Phoenix has been released. All she wants to do is return to Whiskey Creek and get to know her son. But Jacob's father isn't exactly welcoming. Riley doesn't trust Phoenix, doesn't want her in Jacob's life. He is, however, ready to find someone to love. And he wants a good mother for his son. He has no idea that he's about to find both... Previously published [Digitopolis II](#) HarperCollins

By far the biggest change to The UK Pesticide Guide in 2020 is the loss of a number of active ingredients that have been fundamental to many crop protection programmes. The final use-up of chlorothalonil formulations; propiconazole, fenpropimorph, chloridazon and diquat occurs in 2020 but there are also a few exciting new additions. Aclonifen is a new residual herbicide for use in potatoes that already has a number of EAMUs for use in minor crops. BASF is launching its new triazole, mefentrifluconazole, which promises to restore full triazole activity, at least initially. On the insecticide front the new active ingredient from Corteva agriscience, sulfoxaflor, is now listed for use in Cucurbitae and ornamentals under full protection for control of aphids and whitefly.

Based on the blockbuster movie starring Meryl Streep and Kevin Bacon. To help heal a marriage on the rocks, river-rafting expert Gail, her husband Tom, and their son embark on a white water adventure in Montana. Along the way, they encounter two inexperienced rafters supposedly looking for their friends downriver. Little do they know that the men are escaped convicts whose bid for freedom has a body count. Things take a turn when the young family learns that they are now the captives of two armed killers, and it becomes clear that there is much more at stake than a marriage. Desperate to evade both the police and federal marshals, the men force the family down the river and into the mouth of a deadly class 5 white-water rapid. Careening towards mortal peril, Gail and Tom must bond together to save their family from the brutality of nature and the savageness of man. This high-stakes thriller is both a testament to the power of mother nature and a classic adventure story that is perfect for fans of CJ Box and Craig Johnson. Denis O'Neil, the screenwriter for the movie *The River Wild*, brings the striking beauty of the film into his writing and ratchets up the danger that races forward to a breathtaking conclusion.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Five years ago, a supernatural virus changed the world as we know it. What was once the stuff of fantasy and bad horror movies suddenly is reality- werewolves and vampires exist. It isn't the end of the world, though for Korban Diego it often feels as if it is. A survivor of a vicious attack during the initial outbreak, Korban faces quarantine and curfews as well as new rules, regulations and prejudices that make it difficult for a werewolf to get his life back to normal. It's even more challenging when someone he cares about is attacked and doomed to the same fate. Now Korban must face what he has become, before the beast emerges in the tainted moonlight.

This volume presents an in-depth review of experimental and theoretical studies on the newly discovered Fe-based superconductors. Following the Introduction, which places iron-based superconductors in the context of other unconventional superconductors, the book is divided into three sections covering sample growth, experimental characterization, and theoretical understanding. To understand the complex structure-property relationships of these materials, results from a wide range of experimental techniques and theoretical approaches are described that probe the electronic and magnetic properties and offer insight into either itinerant or localized electronic states. The extensive reference lists provide a bridge to further reading. Iron-Based Superconductivity is essential reading for advanced undergraduate and graduate students as well as researchers active in the fields of condensed matter physics and materials science in general, particularly those with an interest in correlated metals, frustrated spin systems, superconductivity, and competing orders.

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
