The high-water mark of the muscle car era is usually credited as 1970, and for good reason; Chevrolet was now stuffing high-powered 454 engines into Chevelles. Adding a larger displacement above the still-available 396 (402) offered buyers the option to order the most powerful production car of that era. The 1970-1972 Chevelles remain the most collectible of the model to this day. Author and historian Dale McIntosh pairs

with restoration expert Rick Nelson to provide this bible of authenticity on the legendary 1970, 1971, and 1972 Chevelle models. Everything about restoring your Chevelle back to bone-stock is covered meticulously, including step-by-step instructions for chassis and interior restoration. Understanding date variances on parts applicable to the build date of your Chevelle is vital to a factory-correct restoration, and including them in this book provides a depth of coverage on these cars that is unequalled. Restoring a 1970-1972 Chevelle back to concours correct takes a certain amount of expertise. Thankfully, Rick and Dale have

done a lot of the heavy lifting on the research side. With this authenticity guide, you can be confident that you have all the correct components and options accurately and expertly represented for your stock restoration. These fine details put the Chevelle Restoration and Authenticity Guide 1970-1972 a cut above the rest.

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling

of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and

decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

About this book: A chainsaw is arguably the most effective tool a person can use to fell trees and clear brush. They're effective, efficient, portable, and can be used in all types of settings. In short, chainsaws are the best teammate a sawyer can have when tasked with felling, bucking, and limbing trees. However, keeping a chainsaw running at its fullest potential

requires a lot of attention to detail during routine maintenance. As Abraham Lincoln is quoted as saying, "give me six hours to chop down a tree and I will spend the first four sharpening the axe."

Thankfully, we're now a far cry from resorting to axes to take down and process trees, but the principle still holds true. You have enough to worry about when operating your chainsaw. Your saw's maintenance shouldn't be one of them. The Comprehensive Chainsaw Maintenance Guidebook is your one-stop source for all the guidance, tips, and tricks you will need to properly maintain your chainsaw and keep it running at peak performance for years to come. About the author: Steven first learned the basic principles of chainsaw safety, operation, troubleshooting, and maintenance while on an AmeriCorps conservation crew. He went on to sharpen his saw skills while fighting wildfires as a lead sawyer on a fuels crew with the Bureau of Land Management. While with the BLM, he also gained valuable

experience as a lead sawyer on a dedicated six-man saw team as part of a twenty-man hand crew. Steven is partial to the medium and larger displacement Stihl saws as those are what he used most during his work experience. His favorites are the full wrap MS 362, 044, and MS 461 models using 22-24" bars for their ability to cut through larger diameter fuels while still being relatively lightweight.
