I am writing this book because I have had many wondrous visions and spiritual experiences including a face to face talk with the Lord of Glory. I began hearing the voice of the Holy Spirit at the age of 18 even though I was not studying the Bible or going to church. I must explain; I am not writing this book from the point of view of a historical, linguist, or a professional or a dogmatic religious Christian. I view scripture from a reality of many actual spiritual encounters including a face to face conversation with the Lord of Glory (Jesus the Christ) in which he qualified my understanding of organized religion by saying, 'what you say is true'. I had just made the statement, 'the people do not know you'. This would be because they follow the dictates of organized religion without having an actual relationship with the Spirit of God. This book is designed to expand your mind and give you a better understanding of the elusive and provocative subject of Bible prophesy at its conclusion, you will know the story, without question. This would include a unreputable scientific explanation of creation, what really happened to Adam and Eve in the Garden of Eden, the purpose of Baptism and coded information found in the Bible. In today's world faith in God has become a myriad of life experiences. Everything from the ultra-conservative right who think that God is the sum total of the American historical understanding, to the rainbow liberal who thinks that religion is a necessary evil for the stability of the human psyche. This kind of thinking has fostered a new concept of spirituality and created a new order of the religious elite. If you cannot credential yourself with some seminary, university or college of higher learning, you are not considered to be qualified to be a leader in the church, by the clergy or the laity. Yet most non-Christians consider Christians to be psychologically inferior. I am not placing blame anywhere because there is enough blame to go around. But how have we arrived at such a place in time where this kind of thinking is so commonplace, not only in the churches but also in every echelon of human endeavor. There is a conspiracy in this world today. It is found in our system of government, in our institutions of learning and in our social/religious endeavors: Keep them Guessing, keep modulating the frequency, never acknowledge the truth, glory in the darkness is the mentality that is slowly eroding the greatest society that has ever existed. The challenge for mankind today is to embrace not only wisdom (education) but to disdain all lies and falsehoods. If we consider ourselves to be enlightened, we must

demonstrate a true example of understanding, based on knowledge and not dogma. I am a person who believes in the faithfulness of good people even before I developed a personal relationship with God. God believed in me because I believed in goodness a word that organized religion has written out of faithfulness but it's actually the very foundation faithfulness is based.

Heinz Kohut's work represents an important departure from the Freudian tradition of psychoanalysis. A founder of the Self Psychology movement in America, he based his practice on the belief that narcissistic vulnerabilities play a significant part in the suffering that brings people for treatment. Written predominantly for a psychoanalytic audience Kohut's work is often difficult to interpret. Siegel uses examples from his own practice to show how Kohut's innovative theories can be applied to other forms of treatment.

When I decided to make a chess puzzle book I had many ideas in mind: The puzzles should be challenging but not so difficult that a chessboard is needed they can be solved on the train, plane or wherever you happen to be when you have a few minutes to spare. The positions should be educational with some instructive point to the solution. I have generally stuck to that, but I also selected many puzzles just because they were fun. The positions are all from fairly recent games, so that the

reader will not have seen them before in older puzzle books. John Shaw is a chess grandmaster who has been Scottish Chess Champion three times.

This book gives a rigorous treatment of selected topics in classical analysis, with many applications and examples. The exposition is at the undergraduate level, building on basic principles of advanced calculus without appeal to more sophisticated techniques of complex analysis and Lebesgue integration. Among the topics covered are Fourier series

and integrals, approximation theory, Stirling's formula, the gamma function, Bernoulli numbers and polynomials, the Riemann zeta function, Tauberian theorems, elliptic integrals, ramifications of the Cantor set, and a theoretical discussion of differential equations including power series solutions at regular singular points, Bessel functions, hypergeometric functions, and Sturm comparison theory. Preliminary chapters offer rapid reviews of basic principles and further background material such as infinite products and commonly applied inequalities. This book is designed for individual study but can also serve as a text for second-semester courses in advanced calculus. Each chapter concludes with an abundance of exercises. Historical notes discuss the evolution of mathematical ideas and their relevance to physical applications. Special features are capsule scientific biographies of the major players and a gallery of portraits. Although this book is designed for undergraduate students, others may find it an accessible source of information on classical topics that underlie modern developments in pure and applied mathematics.
