Like every woman, Antoinette dreams of a life free from the burdens of her childhood. Until she breaks her silence about the abuse she has suffered at the hands of a family member at age six, she believes she has no chance for love, laughter or a happy ending. Life deals Antoinette many unforeseen setbacks: unstable housing, homelessness, a failed marriage and the murder of her sister-but it isn't enough to kill her grit or determination. She rises from being a confused, angry little girl struggling to understand a life she didn't choose to become a wise, confident raising two sons while she earns an MBA. In the tradition of Dorothy Allison's Bastard Out of Carolina and Sapphire's Push, Antoinette White delivers a heartrending, sometimes funny story of a young free-spirited girl navigating poverty-plagued Gary, Indiana in the late 1970s and 1980s. Her life is a blueprint for how to prevail against the lingering pain of incest. As a motivational speaker, Antoinette White has inspired countless women in similar crises to be resilient. This is the story of where her own resilience began.

Leslie Poole, Encounters with the Goddess O'Reilly Media
Over the last few years, IBM® IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs. As the mainframe software products are becoming more integrated with the Windows and mobile environments, a common approach to interfaces is becoming more relevant. The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes. There is also a need to provide more of a common looking interface so the tools do not have a product-specific interface. This allows more cross product integration. Eclipse and web-based interfaces being used in a development environment, tooling using those environments provides productivity improvements in that the interfaces are common and familiar. IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions. This book will take some selected processes and show how this new tooling can be used. This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs. Some of the functions normally done by DBA or console operators can now be done in this eclipse-based environment by the application developers. This means that the need to request these services from others can be eliminated. This IBM Redbooks® publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features, which show an alternative way to accomplish those processes. Each chapter highlights a different area of the DBA processes like: PSB creation Starting/stopping a database in an IMS system Recovering a database Cloning a set of databases

InfoWorld
Los Angeles magazine is a regional magazine of national stature. Our combination of award-winning feature writing, investigative reporting, service journalism, and design covers the people, lifestyle, culture, entertainment, fashion, art and architecture, and news that define Southern California.
