This guide provides a step-by-step explanation of how to use the Safe Hospitals Checklist, and how the evaluation can be used to obtain a rating of the structural and nonstructural safety, and the emergency and disaster management capacity, of the hospital. The results of the evaluation enable hospital's own safety index to be calculated. The Hospital Safety Index

tool may be applied to individual hospitals or to many hospitals in a public or private hospital network, or in an administrative or geographical area. In some countries, such as Moldova, all government hospitals have been evaluated using the Hospital Safety Index. In this respect, the Hospital Safety Index provides a useful method of comparing the relative safety of hospitals across a country or region, showing which hospitals need investment of resources to improve the functioning of the health system. The purpose of this Guide for Evaluators is to provide guidance to evaluators on applying the checklist, rating a hospital's safety and calculating the hospital's safety index. The evaluation will facilitate the determination of the hospital's capacity to continue providing services following an adverse event, and will guide the actions necessary to increase the hospital's safety and preparedness for response and recovery in case of emergencies and disasters. Throughout this document, the terms "safe" or "safety" cover structural and nonstructural safety and the emergency and

disaster management capacity of the hospital. The Hospital Safety Index is a tool that is used to assess hospitals' safety and vulnerabilities, make recommendations on necessary actions, and promote low-cost/high-impact measures for improving safety and strengthening emergency preparedness. The evaluation provides direction on how to optimize the available resources to increase safety and ensure the functioning of hospitals in emergencies and disasters. The results of the evaluation will assist hospital managers and staff, as well as health system managers and decision-makers in other relevant ministries or organizations in prioritizing and allocating limited resources to strengthen the safety of hospitals in a complex network of health services. It is a tool to guide national authorities and international cooperation partners in their planning and resource allocation to support improvement of hospital safety and delivery of health services after emergencies and disasters. Over the past three years, the expert advice of policy-makers and practitioners from disciplines, such as engineering, architecture and emergency medicine, has been compiled, reviewed and incorporated into this second edition of the Guide. Global and regional workshops and virtual consultations have enabled technical and policy experts to contribute to the revision of Hospital Safety Index until consensus was reached on the content for its publication and distribution. Further comments and observations are certain to arise as the Hospital Safety Index continues to be applied across the world and these experiences will enable us to improve future editions. The rapid diagnostic application of the Hospital Safety Index provides, as a comparison, an out-of-focus snapshot of a hospital: it shows enough of the basic features to allow evaluators to confirm or disprove the presence of genuine risks to the safety of the hospital, and the hospital's level of preparedness for the emergencies and disasters to which it will be expected to provide health services in the emergency response. The Hospital Safety Index also takes into account the hospital's

environment and the health services network to which it belongs. This second version of the second edition was released in December 2016.

Journal of Horticulture and Practical Gardening Storey Publishing

A journey through the most unlikely of gardens: the oases of peace people create in the midst of war. In this millennium, we have become war weary. From Afghanistan to Iraq, from Ukraine to South Sudan and Syria, from Kashmir to the West Bank, conflict is as contagious and poisonous as Japanese knotweed. Living through it are people just like us with ordinary jobs, ordinary pressures and ordinary lives. Against a new landscape of horror and violence it is up to them to maintain a modicum of normality and colour. For some, gardening is the way to achieve this. Working in the world's most dangerous war zones, freelance war correspondent and photographer Lally Snow has often chanced across a very moving sight, a testimony to the triumph of the human spirit in adversity, a celebration of hope and beauty: a war garden. In Kabul, the royal gardens are tended by a centenarian gardener, though the king is long gone; in Camp Bastion, bored soldiers improvise tiny gardens to give themselves a moment's peace; on both sides of the dividing line in Jerusalem families tend groves of olives and raise beautiful plants from the unforgiving, disputed landscape; in Ukraine, families tend their gardens in the middle of a surreal, frozen war. War Gardens is a surprising, tragic and beautiful journey through the darkest places of the modern world, revealing the ways people make time and space for themselves and for nature even in the middle of

destruction.

As existing buildings age, nearly half of all construction activity in Britain is related to maintenance, refurbishment and conversions. Building adaptation is an activity that continues to make a significant contribution to the workload of the construction industry. Given its importance to sustainable construction, the proportion of adaptation works in relation to new build is likely to remain substantial for the foreseeable future, especially in the developed parts of the world. Building Adaptation, Second Edition is intended as a primer on the physical changes that can affect older properties. It demonstrates the general principles, techniques, and processes needed when existing buildings must undergo alteration, conversion, extension, improvement, or refurbishment. The publication of the first edition of Building Adaptation reflected the upsurge in refurbishment work. The book quickly established itself as one of the core texts for building surveying students and others on undergraduate and postgraduate built environment courses. This new edition continues to provide a comprehensive introduction to all the key issues relating to the adaptation of buildings. It deals with any work to a building over and above maintenance to change its capacity, function or performance.
