Fossil Record. In the realm of evolution, nature has systematically preserved a fossil record of the unbroken evolutionary series of organisms linking every genus, phylum and species from molecules to man since the origin of life. These sequentially preserved links in the fossil record embedded in the Earth ' s crust now plays like a movie unveiling Charles Darwin ' s beautiful " tree of life. "

Lesson Stories from the Fossil Record | BetterLesson

A team of paleontologists found a supposedly 34 million-year-old fossil cuttlebone that still had both the original aragonite and chitin. This is significant, because one might expect the hard aragonite to persist in the fossil record, but not the organic chitin or protein. More... Fossil Discoveries Disrupt Evolutionary Timescales

The fossil record of human origins and evolution (from exhibits at the National Museum, Nairobi, Kenya, compiled for www.AfricanWorldHeritageSites.org) The fossil evidence for our ancestors over the last seven million years continues to increase as palaeoanthropologists (people who study human fossils) make new discoveries. The story of human

Stories from the fossil record Flashcards | Quizlet

I then instruct the computer students to navigate to the UCMP/Berkeley Stories from the Fossil Record website. I explain that as they move through the four "stories", they must discuss what the evidence they are being provided means. The recorder will then write their agreed upon answer on the evidence chart.

The fossil record - creation.com

The fossil record indeed shows the sudden appearance of complex creatures like the trilobite, and out-of-place fossils demonstrate that new discoveries can help clarify what the true history of the earth is. Indeed, the fossil record demonstrates that creation is a logical explanation for the origin of life and all creatures, ancient and modern.
