The contributors to *Affective Trajectories* examine the mutual and highly complex entwinements between religion and affect in urban Africa in the early twenty-first century. Drawing on ethnographic research

throughout the continent and in African diasporic communities abroad, they trace the myriad ways religious ideas, practices, and materialities interact with affect to configure life in urban spaces. Whether examining the affective force of the built urban environment or how religious practices contribute to new forms of attachment, identification, and place-making, they illustrate the force of affect as it is shaped by temporality and spatiality in the religious lives of individuals and communities. Among other topics, they explore Masowe Apostolic Christianity in relation to experiences of displacement in Harare, Zimbabwe; Muslim identity, belonging, and the global ummah in Ghana; crime, emotions, and conversion to neo-Pentecostalism in Cape Town; and spiritual cleansing in a Congolese branch of a Japanese religious movement. In so doing, the contributors demonstrate how the social and material living conditions of African cities generate diverse affective forms of religious experiences in ways that foster both localized and transnational paths of emotional knowledge.

Understanding and Shaping Curriculum: What We Teach and Why introduces readers to curriculum as knowledge, curriculum as work, and curriculum as professional

practice. Author Thomas W. Hewitt discusses curriculum from theoretical and practical perspectives to not only acquaint readers with the study of curriculum, but also help them to become effective curriculum practitioners. Key Features: Emphasizes the various dimensions of curriculum practice: Becoming a curriculum practitioner requires understanding academic-practice knowledge, the forces shaping curriculum, the array of curriculum work from policymaking to evaluation, and how those are integrated forming a sense of professional practice. This book examines curriculum knowledge that is both academic and practice based. Brings theoretical concepts to life: ?Perspective into Practice? sections illustrate the relevance of the material to both elementary and secondary school settings and contexts. In addition, end-of-chapter resources provide ideas for further discussion and assignments that address

different roles and the various dimensions of curriculum practice. Examines current issues: Part of being a good practitioner is understanding the inevitability of change and the necessity to keep current about issues and trends that affect both the knowledge and the work of curriculum. Separate chapters on issues and trends give students the opportunity to explore what is happening in today?s schools and curriculum. Intended Audience: This is an ideal text for masters and doctoral-level courses on Curriculum, Curriculum Development, and Curriculum Design. Brain Rules NYU Press 'Recovery from Schizophrenia' demonstrates convincingly, but controversially, how political, economic and labour market forces shape social responses to the mentally ill, mould psychiatric treatment philosophy, and influence the onset and course of one of the most common forms of mental illness. "Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—The Washington Post Book World (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual

A lively, up-to-date overview of the newest research in biosocial criminology What is the relationship between criminality and biology? Nineteenth-century

---

phrenologists insisted that criminality was innate, inherent in the offender's brain matter. While they were eventually repudiated as pseudo-scientists, today the pendulum has swung back. Both criminologists and biologists have begun to speak of a tantalizing but disturbing possibility: that criminality may be inherited as a set of genetic deficits that place one at risk to commit theft, violence, or acts of sexual deviance. But what do these new theories really assert? Are they as dangerous as their forerunners, which the Nazis and other eugenicists used to sterilize, incarcerate, and even execute thousands of supposed "born" criminals? How can we prepare for a future in which leaders may propose crime-control programs based on biology?

In this second edition of *The Criminal Brain*, Nicole Rafter, Chad Posick, and Michael Rocque describe early biological theories of crime and provide a lively, up-to-date overview of the newest research in biosocial criminology. New chapters introduce the theories of the latter part of the 20th century; apply and critically assess current biosocial and evolutionary theories, the developments in neuro-imaging, and recent progressions in fields such as epigenetics; and finally, provide a vision for the future of criminology and crime policy from a biosocial perspective. The book is a careful, critical examination of each research approach and conclusion. Both compiling and analyzing the body of scholarship devoted to

---

understanding the criminal brain, this volume serves as a condensed, accessible, and contemporary exploration of biological theories of crime and their everyday relevance.

Reichert. For Sabrina Monroe, moving back home to the Wisconsin Dells--the self-described Waterpark Capital of the World--means returning to the Monroe family curse: the women in her family can see spirits who come to
