Lean and Six Sigma initiatives are designed to enable sustained improvements in your company or organization's efficiency and competitiveness. As with other improvement strategies they are dependent on two things, effective management and your ability to automate or digitize elements of your business process. Lean and Digitize provides you with a convincing picture of each of these elements (process improvement, digitization and the management of both) to help you eliminate waste, improve process and service, and better align your information and

---

communications technology with your strategic objectives. Bernardo Nicoletti analyses and reviews the development of automation and telecommunications systems in the context of quality management and process improvement. He uses case examples to illustrate organizational and management approaches to implementation. These, along with his practical guidance, will help you make sense of the complexity, benefits and interrelations between these different elements. The text shows you on the one hand, how to integrate information and communication systems into your process improvement projects and, on the other, how to align information and communication projects with your quality strategy. Without a holistic approach to technology and quality improvement, your initiatives run the risk of being misdirected or simply running out of steam. Changes of this kind will never be easy but at least if you follow the advice in *Lean and Digitize* you will significantly increase your chances of success.

*Concepts and Cases, Global Edition* SAGE Publications

This book explores two combined approaches (strategy and accounting) from a cross-disciplinary perspective in order to improve knowledge of value creation in various contexts. Existing studies on this topic have generally adopted a purely account-based or strategy-oriented approach to address this issue. However, this book draws upon a number of well-defined theoretical and empirical backgrounds and methodologies. Since the 1980s, many changes have occurred and companies have increasingly focused their

---

strategies on value creation. Consequently, new strategic directions have emerged, especially for managerial accounting. Management accounting and alignment with strategy could thus improve performance. This book encourages further thought and reflection on these issues which should be pursued in the future as firms face new challenges associated with the acceleration of digital transformation.

This book provides an academic introduction to, and presentation and defence of stakeholder theory as a model for the strategic management of

businesses and corporations, as well as of public organizations and institutions. The concept of the stakeholder is generally applied to parties that affect or are affected by the activities of private or public organizations. Distinct from shareholders, stakeholders are those individuals, entities or communities that have a connection with the activities of a corporation, a firm or an organization. The notion of the stakeholder is intimately linked to a conception of the business firm as an entity founded on negotiated governance, in which the maximization of value for the shareholder is not the ultimate criterion. In this model, issues and interests that are not directly associated with shareholders and investors, but which go beyond capital to encompass the concerns of civil society, are considered to be of central importance. This book provides a broad overview of stakeholder theory, presenting it as an ethical approach to strategic management that is both pragmatic and applicable to developing democratic practices within corporations, while at the same time suggesting ways in which elements of a social contract can be elaborated within the context of globalization.

This book covers each step in the asset allocation process, addressing as many of the relevant questions as possible along the way. How can we formulate expectations about long-term returns? How relevant are valuations?

What are the challenges to optimizing the portfolio? Can factor investing add value and, if so, how can it be implemented? Which are the key performance drivers for each asset class, and what determines how they are correlated? How can we apply insights about the business cycle to tactical asset allocation? The book is aimed at finance professionals and others looking for a coherent framework for decision-making in asset allocation, both at the strategic and tactical level. It stresses analysis rather than pre-conceived ideas about investments, and it draws on both empirical research and practical experience to give the reader as strong a background as possible.

In order for High Technology (HT) companies to tackle contemporary demanding market challenges, they frequently deploy time-reduction strategies with respect to product launch. Marketing of technology related products – and

especially cutting edge ones – involves a complex and multidimensional bundle of specific and unique characteristics, such as the complexity of products, the intensity of the competition, confusion and/ or fear of adoption among consumers, fast pacing changes in the external environment. The very nature of the interrelations that evolve as part of the dynamic process of strategy formulation contributes further to the formulation of a very challenging environment which is described as tumultuous, volatile and turbulent. These specific features, qualities and characteristics constitute the core of the innate need for an integrated approach that requires and depends on the cooperation and coordination of specific functional competencies. This book employs a systemic approach that accommodates the integration of specialized departmental capabilities as a fundamental prerequisite and a cornerstone for the successful navigation of high-tech organizations in their extremely competitive environments. It provides a solid and extant context of compact and consistent cognitive background that is specific to the HT strategic marketing field, and a strategic tool that utilizes, relies and is built on the turbulent environment of HT rather than just overlooking, avoiding or ignoring it, and that assumes a proactive point of view, capitalizing on characteristics specific to this field, through the provision of a strategic managerial and marketing model that is overlaid onto a reliably assessed foundation of dynamic qualities, with a long-term orientation and scope, albeit one that would be easy to apply and which will generate immediate results.

Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring

---

accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and the investment community with internal management accounting for managers to leverage for decision making. In addition, the book examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. It is intended for chief financial officers, financial controllers, business analysts, financial planners, financial analysts, budgeting managers, executives, managers, academicians, researchers, and students.
