T1 - Stratigraphy and reservoir characterization of the Silurian Racine Formation in Harristown oil field, central Illinois. AU - Askari, Zohreh. AU - Lasemi, Yaghoob. PY - 2018. Y1 - 2018. N2 - The Middle Silurian Racine Formation is the major oil-producing unit in the southeastern flank of the Sangamon Arch, northwest of the Illinois Basin.

Stratigraphic Reservoir Characterization for Petroleum ...

Various stimulation treatments must be designed to optimize production for different stratigraphic zones or areas of the field. Multiple completions and/or selective injection equipment are required. Reservoir characterization and management problems. Correlations that subdivide the reservoir into meaningful producing zones must be consistent.

Stratigraphic Reservoir Characterization for Petroleum ...

Reservoir characterization is an important aspect in petroleum geology and engineering. It deals with construction of realistic image of petrophysical properties to be used to predict reservoir performance [1]. The present study aims to testify the reservoir potential of one of the Early Jurassic stratigraphic units, which is Butmah

Formation.
