Second Language Testing for Student Evaluation and Classroom Research and its accompanying Student Workbook are introductory-level resources for classroom teachers of all levels of experience, and early-career graduate students in applied linguistics, TESOL, and second/foreign language teaching programs. The book gives a balance between practice and theory for student evaluation, and also aims for readers to use testing to connect to classroom research and to their own teaching. Indeed, Second Language Testing for Student Evaluation and Classroom Research aims at self-discovery and empowerment for readers, even as second language testing as a field undergoes major shifts in scope and areas of concern. Second Language Testing offer a strong basis for readers who wish to analyze and improve their own classroom tests, and for readers who wish to evaluate standardized tests they are required to use, or are thinking of using. We work with the general idea, "OK, now that I know test X has these strengths and weaknesses, what do I do?" Or, "Alright here are students' scores, now how do I use them in my teaching?" At the same time our book provides more in-depth treatments of key testing topics for those readers who want to know "Why?" and "How?" "Why these terms?" "Why this or that analysis?" "Why does it work?" "How does it work?" "What do these numbers mean?" "How do I use them and how do I explain them to my students, my colleagues, my supervisors?" Second Language Testing for Student Evaluation and Classroom Research includes five Appendices for those readers whose interests continue into more advanced areas. Our information and observations on issues such as rater training (Appendix B) are current and discerning, and our Reference section and Glossary would be valued by any advanced testing practitioner or researcher. Second Language Testing is useful to readers at varied levels of engagement, at their choice.

He empowers them to evolve and improve on old, standard, teaching methods. The COVID-19 pandemic drastically transformed the classroom by keeping students and teachers apart for the sake of safety. As schools emptied, remote learning rapidly expanded through online services and video chatrooms. Unfortunately, this disrupted many students and teachers who were not accustomed to remote classrooms. This challenge has forced K-12 teachers to think differently about teaching. Unexpectedly and with little time to prepare, they have been confronted with redesigning their curriculum and instruction from face-to-face to online virtual classrooms to protect students from the COVID-19 virus while ensuring that these new online initiatives remain sustainable and useful in the post-pandemic world. As teachers learn to take advantage of the affordances and strengths of the multiple technologies available for virtual classroom instruction, their instruction both in online and face-to-face will impact what and how students learn in the 21st century. The Handbook of Research on Transforming Teachers' Online Pedagogical Reasoning for Engaging K-12 Students in Virtual Learning examines the best practices and pedagogical reasoning for designing online strategies that work for K-12 virtual learning. The initial section provides foundational pedagogical ideas for constructing engaging virtual learning environments that leverage the unique strengths and opportunities while avoiding the weaknesses and threats of the online world. The following chapters present instructional strategies for multiple grade levels and content areas: best practices that work, clearly describing why they work, and the teachers' pedagogical reasoning that supports online implementations. The chapters provide ways to think about teaching in virtual environments that can be used to guide instructional strategy choices and recognizes the fundamental differences between face-to-face and virtual environments as an essential design component. Covering such topics as K-12 classrooms, pedagogical reasoning, and virtual learning, this text is perfect for professors, teachers, students, educational designers and developers, instructional technology faculty, distance learning faculty, and researchers interested in the subject.
