mastery of this complex subject.
Organic chemistry is a constantly
evolving field that has great
relevance for all scientists, not just
chemists. For chemical engineers,
understanding the properties of

organic molecules and how
reactions occur is critically
important to understanding the
processes in an industrial plant.
For biologists and health
professionals, it is essential because
nearly all of biochemistry springs
from organic chemistry.
Additionally, all scientists can
benefit from improved critical
thinking and problem-solving skills
that are developed from the study
of organic chemistry. Organic
chemistry, like any "skill", is best
learned by doing. It is difficult to
learn by rote memorization, and
true understanding comes only
from concentrated reading, and
working as many problems as
possible. In fact, problem sets are
the best way to ensure that

concepts are not only well understood, but can also be applied to real-world problems in the work place. Glencoe Chemistry: Matter and Change, Student Edition Scorebuilders Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides

undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions.

Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

Fyodor Dostoyevsky's "Notes from Underground" is considered by many to be the first existentialist novel. It presents itself as an excerpt from the rambling memoirs of a bitter, isolated, unnamed narrator (generally referred to by critics as the Underground Man) who is a retired civil servant living in St. Petersburg. The first part of the story is told in monologue form, or the underground man's diary, and attacks emerging Western philosophy,

especially Nikolay Chernyshevsky's "What Is to Be Done?" The second part of the book is called "À propos of the Wet Snow," and describes certain events that, it seems, are destroying and sometimes renewing the underground man, who acts as a first person, unreliable narrator.
