This educational guide provides a much-needed subspecialty-specific learning resource for pediatric hospital medicine.

Featuring 50 of the most commonly presenting topics encountered by pediatric hospitalists, this book brings readers into the morning meeting and walks them through patient presentation, diagnosis, treatment, and resolution, providing realistic examples in an engaging case-based format. This book is designed to supplement the educational experience of trainees during their inpatient pediatrics rotation, and its versatility allows it to be used as an educational guide to lead learning sessions or as an individual resource or study guide. Each chapter dives into an individual case that is titled with a fictitious patient name, often related to the case topic, which provides a helpful memory tool for learners. Each case includes a Documentation Tips section, designed to ensure accurate

and clear communication across the interdisciplinary team that cares for hospitalized children, as well as Clinical Pearls summarizing the main chapter take-aways. Back to Basics boxes are included in cases as needed, to serve as a refresher of examination techniques, laboratory test result analysis, or other foundational information related to the cases. In addition, Health Equity Focus boxes related to social determinants of health are featured throughout the book to help clinicians recognize and address potential inequities in care.

National Board for Respiratory Care (NBRC). This unique review guide devotes extensive coverage to two problematic areas for credentialing exam candidates, which are not covered in any of the other texts: 1). test-taking skills, and 2). key points to remember in taking the NBRC computerized exams. Special emphasis is also given to material and subject areas which have proven to be especially challenging for exam candidates (such as basic pulmonary function testing, arterial blood gas [ABGs] interpretation, monitoring critically ill [ICU] patients, neonatal and pediatric care, recommending modifications to therapy, and more). Certified Respiratory Therapist Review Guide is authored by experts who take the credentialing exam annually, so you can be sure the content and format of this guide is current!

This is a well-organized discussion of the most common issues, both clinical and psychosocial, of general pediatrics. The book covers a wide scope of topics from those as benign as thumb-sucking to those as devastating as HIV and childhood cancer. A case history opens each chapter to set the stage for a practical discussion of primary care pediatrics. This state-of-the-art reference emphasizes concepts in health promotion, illness prevention, and family and community participation. The book includes well-child care for normal children and adolescents. It also discusses premature infants, and children with specific needs such as patients with Down's Syndrome. Signs and symptoms are presented by body system

in a logical approach.

Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specialty crew—needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes

information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.
