This hand book provides detailed information on the nutrient composition of a wide range of common Indian foods available in different parts of India. It also

includes a write-up on the basic aspects of human nutrition. The nutrient composition covers 600 foods, both familiar and less familiar. Only those foods with confirmed scientific names have been included. Besides English, names of the foods in several Indian languages are also given for easy identification by the user. The data on nutrient composition of foods given in this book are entirely based on Indian work, mostly carried out at the National Institute

of Nutrition, Hyderabad, and other research Institutes and University laboratories. An attempt has been made to give a simple account of current concepts of nutritional principles, nutritional chemistry of major food groups and nutritional deficiency diseases, prevalent in the country. This book should be useful to the lay public as well as to the health professionals. Uptodate information on nutritional requirement and

Recommended Dietary Allowances and Guidelines for formulation of nutritionally adequate diets are also given, for the benefit of professionals and informed public.

The English language is spreading across the world, and so too is hip-hop culture: both are being altered, developed, reinterpreted, reclaimed. This timely book explores the relationship between global Englishes (the spread and use of diverse forms of English within processes of globalization) and transcultural flows (the movements, changes and reuses of cultural forms in disparate contexts). This wide-ranging study focuses on the ways English is embedded in other linguistic contexts, including those of East Asia, Australia, West Africa and the Pacific Islands. Drawing on transgressive and performative theory, Pennycook looks at how global Englishes,

transcultural flows and pedagogy are interconnected in ways that oblige us to rethink language and culture within the contemporary world. *Global Englishes and Transcultural Flows* is a valuable resource to applied linguists, sociolinguists, and students on cultural studies, English language studies, TEFL and TESOL courses.

This book provides critical insights into the English-medium instruction (EMI) experiences which have been implemented at a number of universities in countries such as China, Finland, Israel, the Netherlands, South Africa, Spain and the USA, which are characterised by differing political, cultural and sociolinguistic situations. In particular, it reflects on the consequences of implementing EMI as an attempt to gain visibility and as a strategy in response to the need to become competitive in both national and international markets. The

pitfalls and challenges specific to each setting are analysed, and the pedagogical issues and methodological implications that arise from the implementation of these programmes are also discussed. This volume will serve to advance our awareness about the strategies and tools needed to improve EMI at tertiary level.

New York City has the largest medical examiner's office in the United States, and the Brooklyn division is the busiest of the five boroughs. Charles A. Catanese received his Forensic Pathology fellowship training in New York, and then worked full time as a Medical Examiner in the Brooklyn office for more than 10 years. He has personally performed more than 4000 autopsies, including over 400

homicides. Dr. Catanese has worked through several disasters, including TWA Flight 800, AA Flight 587, and more than nine months on the World Trade Center fatalities. He is currently the Chief Medical Examiner of Orange County, New York. Drawing on his wealth of knowledge and experience in solving some of the most difficult cases a forensic examiner could encounter, he assembles hundreds of images from his own work experience to present the Color Atlas of Forensic Medicine and Pathology. Featuring twice the number of images as any other forensic pathology atlas, the book is filled with high-resolution photos that demonstrate postmortem changes of the human body and the different types of patterns produced in deaths

caused by: Natural causes
Diagnostic or therapeutic procedures
Substance abuse
Poisoning
Child abuse
Firearms
Blunt instruments
Sharp instruments
Burns
Asphyxia
This easy-to-read atlas, created for medical and non-medical personnel, covers basic and advanced forensic concepts that relate to all manners of deaths. The carefully worded, unambiguous text describing each photo and the side-by-side comparisons of similar, yet different, pathologies make this remarkable atlas a powerful teaching tool for all those who must confront and solve the mystery of human demise. Ernesto Macaro brings together a wealth of research on the rapidly expanding phenomenon of English Medium Instruction. Against a backdrop of theory, policy documents, and examples of practice, he weaves together research in both secondary and tertiary education, with a particular focus on the key stakeholders involved in EMI: the teachers and the students. Whilst acknowledging that the momentum of EMI is unlikely to be diminished, and identifying its potential benefits, the author raises questions about the ways it has been introduced and developed, and explores how we can arrive at a true cost-benefit analysis of its future impact. “This state-of-the-art monograph presents a wide-ranging, multi-perspectival yet coherent overview of research, policy,

and practice of English Medium Instruction around the globe. It gives a thorough, in-depth, and thought-provoking treatment of an educational phenomenon that is spreading on an unprecedented scale.”

Vol. 2: Published for the first time in English alphabetical order, vol. 2 (of the 5 original volumes) of "Canon of Medicine" (Law of Natural Healing), is an essential addition to the history of medicine as it holds a treasure of information on natural pharmaceuticals used for over 1000 years to heal various diseases and disorders. Fully color illustrated with a 150 page, 7000 word index of the healing properties of each of the entries, the text itself is an alphabetical listing of the natural pharmaceuticals of the simple compounds. By simple compounds, Avicenna includes the individual plants, herbs, animals and minerals that have healing properties. Avicenna lists 800 tested natural pharmaceuticals

including plant, animal and mineral substances. The compiler has included the Latin, Persian and Arabic names of the drugs along with artistic renderings of the drugs as illustrations as well as Avicenna's Tables or Grid for each entry that describes the individual, specific qualities of simple drugs.

A series of seminal technological revolutions has led to a new generation of electronic devices miniaturized to such tiny scales where the strange laws of quantum physics come into play. There is no doubt that, unlike scientists and engineers of the past, technology leaders of the future will have to rely on quantum mechanics in their everyday work. This makes teaching and learning the subject of paramount importance for further progress. Mastering quantum physics is a very non-trivial task and its deep understanding can only be

achieved through working out real-life problems and examples. It is notoriously difficult to come up with new quantum-mechanical problems that would be solvable with a pencil and paper, and within a finite amount of time.

This book remarkably presents some 700+ original problems in quantum mechanics together with detailed solutions covering nearly 1000 pages on all aspects of quantum science. The material is largely new to the English-speaking audience. The problems have been collected over about 60 years, first by the lead author, the late Prof. Victor Galitski, Sr. Over the years, new problems were added and the material polished by Prof. Boris Karnakov. Finally, Prof. Victor Galitski, Jr., has extended the material with new problems particularly relevant to modern science.

A collection of cutting-edge accounts of special topics from various fields of forensic pathology and

death scene investigation. The authors offer critical insight into the medicolegal investigation of bodies found in water, the forensic aspects of the human immunodeficiency virus (HIV)-1 infection of the central nervous system, deaths in a head-down position, and forensic bite mark analysis. Additional chapters address taphonomic changes in human bodies during the early postmortem interval, arrhythmogenic ventricular dysplasia that produces sudden death in young people, the postmortem diagnosis of death in anaphylaxis, and iatrogenic deaths. The forensic aspects of suicide, murder-suicide, and suicide trends in the United States are also discussed, along with the evaluation of fatal

pulmonary thromboembolism and the use of radiology in medicolegal investigations. The Zigzag Way HMH The transition in anthropological and biomedical research methods over the past 50 years, from anthropometric and craniometric measurements to large-scale microarray genetic studies has resulted in continued revision of opinions and ideas relating to the factors and forces that drive human variation. Human Variation: From the Laboratory to the Field brings together the contributions of 22 scientists working in four continents to identify and address challenges imposed by variability. It reviews the way we examine and analyze human variation, paying specific attention to

genetics, growth and development, and physiology. In presenting new evidence and findings, it also discusses current developments in methodology and analytical techniques, detailing both field and laboratory approaches, and looking at how the two perspectives complement each other. In bridging that gap between laboratory trials and studies of the human in context, this book covers a number of interesting research areas including — Human adaptation to natural and artificial light, including variations in circadian photosensitivity and effects of light on GI activity Cold tolerance and lifestyle in modern society Genetics of body weight and obesity Human adaptability to emotional and intellectual

mental stresses Geography, migration, climate, and environmental plasticity as contributors to human variation Impact of natural environmental stressors including pollution on physiological and morphological processes This book is the latest volume in a series of works from the Society for the Study of Human Biology (SSHB), which for half a century has advanced and promoted research in the biology of human populations in all of its branches including human viability, genetics, human adaptability, and ecology, and evolution. It holds two scientific meetings a year. This volume represents work presented during its most recent gathering. New Age International Outlines a bold new model for a

just and flourishing earth
Analyzes why so many well-meaning reform efforts fall short
Explains what everyone can do to make this new model a reality
Our current economic system - which assumes endless growth and limitless potential wealth - flies in the face of the fact that the earth's resources are finite. The result is increasing destruction of the natural world and growing, sometimes lethal, tension between rich and poor, global north and south. Trying to fix problems piecemeal is not the solution. We need a comprehensive new vision of an economy that can serve people and all of life's commonwealth. Peter G. Brown and Geoffrey Garver use the core Quaker principle of "right relationship" - interacting in a way that is respectful to all and that aids the common good - as the foundation for a new economic model. Right Relationship poses five basic questions: What is an economy for? How does it work? How big is too big? What's fair? And how can it best be governed? Brown and Garver expose the antiquated,

shortsighted, and downright dangerous assumptions that underlie our current answers to these questions, as well as the shortcomings of many current reform efforts. They propose new answers that combine an acute awareness of ecological limits with a fundamental focus on fairness and a concern with the spiritual, as well as material, well-being of the human race. Brown and Garver describe new forms of global governance that will be needed to get and keep the economy in right relationship. Individual citizens can and must play a part in bringing this relationship with life and the world into being. Ultimately the economy, as indeed life itself, is a series of interconnected relationships. An economy based on the idea of "right relationship" offers not only the promise of a bountiful future but also an opportunity to touch the fullness of human meaning and, some would say, the presence of the Divine.
