Outlines a bold new model for a just and flourishing earth Analyzes why so many well-meaning reform efforts fall short Explains what everyone can do to make this new model a reality Our current economic system - which assumes endless growth and limitless potential wealth - flies in the face of the fact that the earths resources are finite. The result is increasing destruction of the natural world and growing, sometimes lethal, tension between rich and poor, global north and south. Trying to fix problems piecemeal is not the solution. We need a comprehensive new vision of an economy that can serve people and all of lifes commonwealth. Peter G. Brown and Geoffrey Garver use the core Quaker principle of "right relationship" - interacting in a way that is respectful to all and that aids the common good - as the foundation for a new economic model. Right Relationship poses five basic questions: What is an economy for? How does it work? How big is too big? Whats fair? And how can it best be governed? Brown and Garver expose the antiquated, shortsighted, and downright dangerous assumptions that underlie our current answers to these questions, as well as the shortcomings of many current reform efforts. They propose new answers that combine an acute awareness of ecological limits with a fundamental focus on fairness and a concern with the spiritual, as well as material, well-being of the human race. Brown and Garver describe new forms of global governance that will be needed to get and keep the economy in right relationship. Individual citizens can and must play a part in bringing this relationship with life and the world into being. Ultimately the economy, as indeed life itself, is a series of interconnected relationships. An economy based on the idea of "right relationship"

offers not only the promise of a bountiful future but also an opportunity to touch the fullness of human meaning and, some would say, the presence of the Divine.

A series of seminal technological revolutions has led to a new generation of electronic devices miniaturized to such tiny scales where the strange laws of quantum physics come into play. There is no doubt that, unlike scientists and engineers of the past, technology leaders of the future will have to rely on quantum mechanics in their everyday work. This makes teaching and learning the subject of paramount importance for further progress. Mastering quantum physics is a very non-trivial task and its deep understanding can only be achieved through working out real-life problems and examples. It is notoriously difficult to come up with new quantum-mechanical problems that would be solvable with a pencil and paper, and within a finite amount of time. This book remarkably presents some 700+ original problems in quantum mechanics together with detailed solutions covering nearly 1000 pages on all aspects of quantum science. The material is largely new to the English-speaking audience. The problems have been collected over about 60 years, first by the lead author, the late Prof. Victor Galitski, Sr. Over the years, new problems were added and the material polished by Prof. Boris Karnakov. Finally, Prof. Victor Galitski, Jr., has extended the material with new problems particularly relevant to modern science.

The English language is spreading across the world, and so too is hip-hop culture: both are being altered, developed, reinterpreted, reclaimed. This timely book explores the relationship between global Englishes (the spread and use of diverse forms of English within processes of globalization) and transcultural flows (the movements, changes and reuses of cultural forms in disparate contexts). This wide-ranging study focuses on the ways English is embedded in other linguistic contexts, including those of East Asia, Australia, West Africa and the Pacific Islands. Drawing on transgressive and performative theory, Pennycook looks at how global Englishes, transcultural flows and pedagogy are interconnected in ways that oblige us to rethink language and culture within the contemporary world. Global Englishes and Transcultural Flows is a valuable resource to applied linguists, sociolinguists, and students on cultural studies, English language studies, TEFL and TESOL courses.

This book describes the creative strategies employed by teachers and students in periphery communities in order to use the English language in a manner that suits their needs while subtly resisting the linguistic imperialism that many scholars have identified as the consequence of the global ELT enterprise. After developing trends and ideas from those oppositional strategies, the book goes on to outline elements of a critical pedagogy suitable for ELT in formerly colonized communities. As the English language continues to spread globally, this book will be essential reading for English teachers and applied linguists wishing to understand the ideological challenges in the periphery. Curriculum planners and policy makers will also find it a necessary aid to exploring the pedagogical alternatives.

Born in India, her mother tongue Gujarati, educated in America and now living in Germany, Sujata Bhatt in her writing bridges continents, languages and identities. In Pure Lizard she further explores the dislocations and transformations first encountered in her acclaimed first collection Brunizem (1988). A being with 'pure lizard' skin appears as a Sibyl; Jane Eyre haunts a laboratory in Baltimore; monkeys inhabit new spaces; a field of sunflowers in Pennsylvania is set beside sunflowers grown in Chernobyl to remove toxic waste from the soil... Pure Lizard continues Bhatt's dialogue with other art forms: the etchings of Paula Rego, the music of Telemann and Philip Glass. Grounded in a world of science, history and minute observation, Bhatt's inventinos are made palpable and moving by her profound sympathy, her distinctive vision through language.

This hand book provides detailed information on the nutrient composition of a wide range of common Indian foods available in different parts of India. It also includes a write-up on the basic aspects of human nutrition. The nutrient composition covers 600 foods, both familiar and less familiar. Only those foods with confirmed scientific names have been included. Besides English, names of the foods in several Indian languages are also given for easy identification by the user. The data on nutrient composition of foods given in this book are entirely based on Indian work, mostly carried out at the National Institute of Nutrition, Hyderabad, and other research Institutes and University laboratories. An attempt has been made to give a simple account of current concepts of nutritional principles, nutritional chemistry of major food groups and nutritional deficiency diseases, prevalent in the country. This book should be useful to the lay public as well as to the health professionals. Uptodate information on nutritional requirement and Recommended Dietary Allowances and Guidelines for formulation of nutritionally adequate diets are also given, for the benefit of professionals and informed public.

The transition in anthropological and biomedical research methods over the past 50 years, from anthropometric and craniometric measurements to large-scale microarray genetic studies has resulted in continued revision of opinions and ideas relating to the factors and forces that drive human variation. Human Variation:From the Laboratory to the Field brings together the contributions of 22 scientists working in four continents to identify and address challenges imposed by variability. It reviews the way we examine and analyze human variation, paying specific attention to genetics, growth and development, and physiology. In presenting new evidence and findings, it also discusses current developments in methodology and analytical techniques, detailing both field and laboratory approaches, and looking at how the two perspectives complement each other. In bridging that gap between laboratory trials and studies of the human in context, this book covers a number of interesting research areas including — Human adaptation to natural and artificial light, including variations in circadian photosensitivity and effects of light on GI activity Cold tolerance and lifestyle in modern society Genetics of body weight and obesity Human adaptability to emotional and intellectual mental stresses Geography, migration, climate, and environmental plasticity as contributors to human variation Impact of natural environmental stressors including pollution on physiological and morphological processes This book is the latest volume in a series of works from the Society for the Study of Human Biology (SSHB), which for half a century has advanced and promoted research in the biology of human populations in all of its branches including human viability, genetics, human adaptability, and ecology, and evolution. It holds two scientific meetings a year. This volume represents work presented during its most recent gathering.

New York City has the largest medical examiner’s office in the United States, and the Brooklyn division is the busiest of the five boroughs. Charles A. Catanese received his Forensic Pathology fellowship training in New York, and then worked full time as a Medical Examiner in the Brooklyn office for more than 10 years. He has personally performed more than 4000 autopsies, including over 400 homicides. Dr. Catanese has worked through several disasters, including TWA Flight 800, AA Flight 587, and more than nine months on the World Trade Center fatalities. He is currently the Chief Medical Examiner of Orange County, New York. Drawing on his wealth of knowledge and experience in solving some of the most difficult cases a forensic examiner could encounter, he assembles hundreds of images from his own work experience to present the Color Atlas of Forensic Medicine and Pathology. Featuring twice the number of images as any other forensic pathology atlas, the book is filled with high-resolution photos that demonstrate postmortem changes of the human body and the different types of patterns produced in deaths caused by: Natural causes Diagnostic or therapeutic procedures Substance abuse Poisoning Child abuse Firearms Blunt instruments Sharp instruments Burns Asphyxia This easy-to-read atlas, created for medical and non-medical personnel, covers basic and advanced forensic concepts that relate to all manners of deaths. The carefully worded, unambiguous text describing each photo and the side-by-side comparisons of similar, yet different, pathologies make this remarkable atlas a powerful teaching tool for all those who must confront and solve the mystery of human demise. A fully searchable DVD version is also available.

This book provides critical insights into the English-medium instruction (EMI) experiences which have been implemented at a number of universities in countries such as China, Finland, Israel, the Netherlands, South Africa, Spain and the USA, which are characterised by differing political, cultural and sociolinguistic situations. In particular, it reflects on the consequences of implementing EMI as an attempt to gain visibility and as a strategy in response to the need to become competitive in both national and international markets. The pitfalls and challenges specific to each setting are analysed, and the pedagogical issues and methodological implications that arise from the implementation of these programmes are also discussed. This volume will serve to advance our awareness about the strategies and tools needed to improve EMI at tertiary level.

A collection of cutting-edge accounts of special topics from various fields of forensic pathology and death scene investigation. The authors offer critical insight into the medicolegal investigation of bodies found in water, the forensic aspects of the human immunodeficiency virus (HIV)-1 infection of the central nervous system, deaths in a head-down position, and forensic bitemark analysis. Additional chapters address taphonomic changes in human bodies during the early postmortem interval, arrhythmogenic ventricular dysplasia that produces sudden death in young people, the postmortem diagnosis of death in anaphylaxis, and iatrogenic deaths. The forensic aspects of suicide, murder-suicide, and suicide trends in the United States are also discussed, along with the evaluation of fatal pulmonary thromboembolism and the use of radiology in medicolegal investigations.
