Nicknamed the International Express, the New York City Transit Authority 7 subway line runs through a highly diverse series of ethnic and immigrant neighborhoods in Queens. People from Andean South America, Central America, China, India, Italy, Korea, Mexico, Pakistan, Poland, Romania, and Vietnam, as well as residents of a number of gentrifying blue-collar and industrial neighborhoods, fill the busy streets around the stations. The 7 train is a microcosm of a specifically urban, New York experience, in which individuals from a variety of cultures and social classes are forced to interact and get along with one another. For newcomers to the city, mastery of life in the subway space is a step toward assimilation into their new home. In International Express, the French ethnographer St é phane Tonnelat and his collaborator William Kornblum, a native New Yorker, ride the 7 subway line to better understand the intricacies of this phenomenon. They also ask a group of students with immigrant backgrounds to keep diaries of their daily rides on the 7 train. What develops over time, they find, is a set of shared

subway competences leading to a practical cosmopolitanism among riders, including immigrants and their children, that changes their personal values and attitudes toward others in small, subtle ways. This growing civility helps newcomers feel at home in an alien city and builds what the authors call a "situational community in transit." Yet riding the subway can be problematic, especially for women and teenagers. Tonnelat and Kornblum pay particular attention to gender and age relations on the 7 train. Their portrait of integrated mass transit, including a discussion of the relationship between urban density and diversity, is invaluable for social scientists and urban planners eager to enhance the cooperative experience of city living for immigrants and ease the process of cultural transition.

Why is the Mona Lisa the most famous painting in the world? Why did Facebook succeed when other social networking sites failed? Did the surge in Iraq really lead to less violence? And does higher pay incentivize people to work harder? If you think the answers to these questions are a matter of common sense, think again. As sociologist and network science pioneer Duncan Watts explains in this provocative book, the explanations that we give for the outcomes that we observe in life-explanations that seem obvious once we know the answer-are less useful than they seem. Watts shows how commonsense reasoning and history conspire to mislead us into thinking that we understand more about the world of human behavior than we do; and in turn, why attempts to predict, manage, or manipulate social and economic systems so often go awry. Only by understanding how and

when common sense fails can we improve how we plan for the future, as well as understand the present-an argument that has important implications in politics, business, marketing, and even everyday life.

Disasters such as earthquakes, cyclones, floods, heat waves, nuclear accidents, and large scale pollution incidents take lives and cause exceptionally large health problems. The majority of large-scale disasters affect the most vulnerable populations, which are often comprised of people of extreme ages, in remote living areas, with endemic poverty, and with low literacy. Health-related emergency disaster risk management (Health-EDRM) [1] refers to the systematic analysis and management of health risks surrounding emergencies and disasters; it plays an important role in reducing hazards and vulnerability along with extending preparedness, response, and recovery measures. This concept encompasses risk analyses and interventions, such as accessible early warning systems, timely deployment of relief workers, and the provision of suitable drugs and medical equipment, to decrease the impact of disaster on people before, during, and after disaster events. Disaster risk profiling and interventions can be at the personal/household, community, and system/political levels; they can be targeted at specific health risks including respiratory issues caused by indoor burning,

re-emergence of infectious disease due to low vaccination coverage, and gastrointestinal problems resulting from unregulated waste management. Unfortunately, there has been a major gap in the scientific literature regarding Health-EDRM. The aim of this Special Issue of IJERPH was to present papers describing/reporting the latest disaster and health risk analyses, as well as interventions for health-related disaster risk management, in an effort to address this gap and facilitate major global policies and initiatives for disaster risk reduction.

This book proposes an approach to the analysis of information using a neural network based on neural-like elements and temporal summation of signals, which makes it possible to implement a structural approach to the analysis of information streams. Together with associative access to information, structural multilevel analysis enables the interpretation of information processing in columns of the cerebral cortex of humans. Using representations of information processing in the hippocampus, it is possible to re-construct the human model of the world and to interpret purposeful behaviour. The book describes the procedure for synchronizing the world models of various people, allowing automatic semantic analysis of unstructured text information, including

construction of a semantic network of a text as its semantic portrait.

For nearly a decade, Jackie Apodaca and Michael Kostroff shared duties as advice columnists for the actors' trade paper, Backstage. Their highly popular weekly feature, "The Working Actor," fielded questions from actors all over the country. A cross between "Dear Abby" and The Hollywood Reporter, their column was a fact-based, humorous, compassionate take on the questions actors most wanted answered. Using some of their most interesting, entertaining, and informative columns as launch points, Answers from "The Working Actor" guides readers through the ins and outs (and ups and downs) of the acting industry. Apodaca and Kostroff share an approach that is decidedly "on the ground." They've both labored in the trenches just like their readers—dealing with auditions, classes, photos, résumés, rehearsals, contract negotiations, representatives, jobs, challenging colleagues, and the search for that elusive life/career balance. There are few absolutes in the acting profession and virtually no proven and reliable steps. Unlike books that claim to offer "Quick Steps to a Successful Acting Career," Answers from "The Working Actor" deals honestly with the realities, providing facts, options, strategies, stories, points of view, and the wisdom of experience, while ultimately challenging readers to make their own decisions. This book will give new actors a head start on their journeys and remind experienced professionals that, in the acting business, there is never only one answer to any question.
