The other main use of Sudo is on a personal workstation where the desktop user has full root access. In this case, the user is the administrator and simply uses Sudo as a convenient way to run privileged programs without having to spawn a root shell. Include an API to support analysis and reporting and reporting tools.

### **Sudo Mastery User Access Control**

Sudo lets you divide root's monolithi. Unix-like operating systems have a primitive access control system. The root account can do anything. Other users are

peasants with only minimal system access. This worked fine in UNIX's youth, but today, system administration responsibilities are spread among many people and applications.

### **RFC: Role-Based Access Control for Sudo**

Sudo Mastery will teach you to:

- \* design a sudo policy rather than slap rules together
- \* simplify policies with lists and aliases
- \* use non-Unix information sources in policies
- \* configure alternate sudo policies
- \* manage shell environments
- \* verify system integrity and perform intrusion detection
- \* have a common sudo policy across your server

- \* manage sudo policies via LDAP
- \* log and debug sudo
- \* log and replay full sudo sessions
- \* use authentication systems other than passwords

While ...

User Access ...  
Your OpenLDAP is okay to  
control access with sudo.  
You have two possibilities  
at this moment, migrate  
your /etc/sudoers or start  
from zero.

3.7. Managing Login  
Permissions for Domain  
Users Red Hat ...  
DESCRIPTION sudo  
allows a permitted user  
to execute a command as  
the superuser or another

user, as specified by the  
security policy. The  
invoking user's real (not  
effective) user-ID is used  
to determine the user  
name with which to query  
the security policy. sudo  
supports a plugin  
architecture for security  
policies and input/output  
logging.

The sudo command  
allows you to grant  
administrator

privileges, usually only  
available to the root  
user, to regular users.  
Below I show you the  
simplest method to  
create a new user with  
sudo access without  
needing to modify your  
server's sudoers file. If  
you just need to  
configure sudo for an  
existing user, skip to  
step 3.
