What is motivational dysfunction? You have seen it, you may even have experienced it, and you have certainly felt the effects of this dysfunction in your workplace. Often undiagnosed, employees suffering from motivational dysfunction have lowered motivation caused by a lack of excitement for their job. This serious issue can cost companies billions of dollars per year in lost productivity. How can you combat this in your organization? Simply put, leadership is the cure. Focusing on the people aspect of supply chains, *Modeling and Benchmarking Supply Chain Leadership: Setting the Conditions for Excellence* provides the framework for leading people to achieve new levels of excellence. Applying his 30 years of supply chain experience and exemplary leadership, Joe Walden details the qualities considered benchmarks for measuring leadership success. He uses the LEADERSHIP® acronym to establish a framework. Each chapter examines a critical attribute, defining it and using examples of good and bad leadership from the military and a range of commercial industries. Just as the study of operations management used the House of Quality to describe how quality is designed into and built into a product; Walden looks at how the attributes of leadership form a House of Leadership. More than a few business leaders have insinuated that the supply chain is where future competitions will be ?and winning those competitions will require leadership. While technical skills, automation of functions, and information systems are important, without the right people with the right training and skill set, supply chains will fail and motivational dysfunction will take hold. This book provides a model of leadership to motivate your team and empower them to make the decisions that set the conditions for supply chain victory.

In February 2002, the Industrial and Systems Engineering (ISE) Department at the University of Florida hosted a National Science Foundation Workshop on Collaboration and Negotiation in Supply Chain Management and E Commerce. This workshop focused on characterizing the challenges facing leading edge firms in supply chain management and electronic commerce, and identifying research opportunities for developing new technological and decision support capabilities sought by industry. The audience included practitioners in the areas of supply chain management and E Commerce, as well as academic researchers working in these areas. The workshop provided a unique setting that has facilitated ongoing dialog between academic researchers and industry practitioners. This book codifies many of the important themes and issues around which the workshop discussions centered. The editors of this book, all faculty members in the ISE Department at the University of Florida, also served as the workshop's coordinators. In addition to workshop participants, we also invited contributions from leading academics and practitioners who were not able to attend. As a result, the chapters herein represent a collection of research contributions, monographs, and case studies from a variety of disciplines and viewpoints. On the academic side alone, chapter authors include faculty members in supply chain and operations management, marketing, industrial engineering, economics, computer science, civil and environmental engineering, and building construction departments.

It is commonly recognized that logistics has become a major strategic issue for all companies, whether they are part of the primary, secondary or tertiary sector. Faced with the external pressures of globalization and competition, logistics optimizes processes and reduces production and delivery cycles. The use of Sustainable Supply Chain Management (SuSCM) is now increasingly at the center of thought, due to the numerous factors favoring its implementation: requests from various stakeholders, governmental pressures (decrees, laws, regulations, etc.), environmental pressures (pollution, disappearance of fuel fossils, etc.) and societal pressures (reputation/image, protection, etc.). However, there are still obstacles to the implementation of SuSCM, including significant costs, the complexity of coordination and the lack of communication within the whole supply chain. Nevertheless, it should nowadays be included by any organization in its decision towards a strategic approach towards sustainability. This book presents each economic, environmental and societal aspect of SuSCM. By considering each of these dimensions separately, the primary objective is to facilitate the implementation of the elements that make it up. Readers are also provided with several " strategic interpretive lenses " to be able to perform audits and diagnostics of each component. Contents: 1. The Economic Aspect of Sustainable Supply Chain Management. 2. The Environmental Aspect of Sustainable Supply Chain Management. 3. The Social/Societal Aspect of Sustainable Supply Chain Management. 4. Sustainable Supply Chain Management Balanced Scorecard. About the Authors Jo è lle Morana is Lecturer in management science, attached to the Laboratoire d ' Economie des Transports (Transport Economy Laboratory) at University Lumi è re Lyon II in France. For research in all subjects and among different philosophical paradigms, research methodologies form one of the key issues to rely on. This volume brings a series of papers together, which present different research methodologies as applied in supply chain management. This comprises review oriented papers that look at what kind of methodologies have been applied, as well as methodological papers discussing new developments needed to successfully conduct research in supply chain management. The third group is made up of applications of the respective methodologies, which serve as examples on how the different methodological approaches can be applied. All papers have undergone a review process to ensure their quality. Therefore, we hope that this book will serve as a valid source for current and future researchers in the field. While the workshop on " Research Methodologies in Supply Chain Management " took place at the Supply Chain Management Center, Carl von Ossietzky University in Oldenburg, Germany, it is based on a collaboration with the Supply Chain Management Group of the Department of Operations Management at the Copenhagen Business School and the Department of Production Management at the Vienna University of Economics and Business Administration. We would like to thank all those who contributed to the workshop and this book.
